a volume representing a fresh perspective on cognition research that is leading to major improvements in educational and psychological testing each chapter provides an updated treatment of the relationship between advances in cognitive psychology and their implications for assessing test subjects

the international handbook of research in medical education is a review of current research findings and contemporary issues in health sciences education the orientation is towards research evidence as a basis for informing policy and practice in education although most of the research findings have accrued from the study of medical education the handbook will be useful to teachers and researchers in all health professions and others concerned with professional education the handbook comprises 33 chapters organized into six sections research traditions issues in learning the educational continuum instructional strategies assessment and implementing the curriculum the authors are internationally recognized authorities in medical education who have all made substantial contributions to this literature the research orientation of the handbook makes this work an invaluable resource to researchers and scholars and should help practitioners to identify research to place their educational decisions on a sound empirical footing

this accessible and engaging book for undergraduates is less cluttered with details than other books for the course and students like to read it it offers an up to date analysis of the most widely used tests in educational industrial clinical and health settings the third edition features a significant increase in the number of test profiles sample items and figures while it addresses timely and controversial topics such as nationalized testing test bias and cross cultural issues kaplan and saccuzzo cover the technical principles of test evaluation and construction in a concise comprehensible manner using practical examples from real life assuming no theoretical background and little knowledge of statistics the book provides thorough coverage of basic statistical concepts while ensuring an understanding of important principles

with the current push toward educational reform there is great potential for innovation and change particularly in large scale testing one area where change is possible is in cognitive diagnostic assessment researchers in educational measurement and cognitive psychology are finally in a position to design tests targeted specifically for providing valuable information about students cognitive strengths and weaknesses this self contained volume organizes

what is known about cognitive diagnostic assessment in education including its conceptual and philosophical basis methods and applications the complete list of topics includes educational demand philosophical rationale construct validity cognitive methods test construction statistical models and unresolved issues e g how to best translate diagnostic information into teaching practices leighton and gierl present a comprehensive and up to date examination of cognitive diagnostic assessment in education

the clinical interview using dsm iv tr volume 2 the difficult patient applies the four dimensional interviewing approach outlined in its companion volume the clinical interview using dsm iv tr volume 1 fundamentals to the difficult patient it also enhances the interviewing process by employing specialized techniques that correspond with difficulties often encountered by clinicians through numerous case examples this book shows how integrating psychodynamic cognitive and neuropsychiatric approaches as well as the legal system's methods of cross examination and voice stress analysis can help elicit reliable information from tough patients and aid in solving their diagnostic puzzles material has been added on pain in somatization disorder mental retardation oppositional behavior completely updated for dsm iv tr this book strives to overcome generalization in interviewing by promoting a differential approach that individualizes and explores each disorder and all its contributing factors in depth thus preparing the patient for optimal therapeutic intervention

comprehensive discussion of the principles of cognitive psychology and their application to teaching includes current approaches to problem solving critical thinking and reflective thought and new research

background age is the greatest risk factor for developing dementia and the total number of people aged 60 years and above is expected to more than double globally from 2013 to 2050 1 primary health care phc is important for basic diagnostic evaluations objective test measurements have been shown to be more reliable than a patient's subjective memory complaints in dementia assessments 2 however several studies indicate the low use of objective cognitive screening tools in dementia diagnostics in phc 3 some general practitioners gps do not perceive today's cognitive instruments as helpful in the diagnostic process and administration problems have been reported in phc 4 5 the overall aim of this thesis was to investigate the accuracy of several cognitive tests used in dementia

assessments in phc especially among older patients a quick test of cognitive speed aqt cognistat and cognitive assessment battery cab the normative values of the mini mental status examination mmse in the oldest old was also studied methods the studies included in this thesis are from two different study populations studies i ii and iv patients with and without cognitive symptoms were recruited from four primary health care centres in sweden between 2007 and 2009 study iii the elderly in linköping screening assessment elsa 85 cohort population examined people born in 1922 in the municipality of linköping sweden results study i results showed that aqt is a usable test for dementia diagnosis in phc sensitivity for aqt is superior to the clock drawing test cdt equivalent to mmse and the combination mmse and cdt the auc for aqt was 0.773 valued good enough study ii overall the results for cognistat in this study are superior to mmse and cdt also in combination cognistat is promising for improved dementia diagnosis in phc with a quick and easily administered multi domain test for dementia assessments study iii this study presents valuable information about normative mmse data for the oldest patients results suggest using the 25th percentile in mmse of 25 to 26 points and indicate that mmse 26 is as a reasonable cut off for cognitive decline and further medical evaluation in older persons aged from 85 to 93 years study iv in summary the additive value of the cab test in dementia investigations in phc is not obvious in addition to questionable accuracy the test is quite time consuming and normative values are scarce by introducing the numerical sum cabsum the accuracy was increased conclusion in conclusion objective cognitive tests are an important part of dementia diagnosis in phc and there is a need for improved instruments and norm values from our results several cognitive quick tests are usable in phc mmse aqt and cognistat but they have some disadvantages mmse 26 is a reasonable cut off for cognitive decline in the oldest patients 85 to 93 years from a well educated population with quite good socioeconomic there is a great interest in finding short and better multi domain instruments but the additive value of cab in dementia investigations in phc is questionable
