this volume debates the complex nature of the relationships between globalization social and economic transformations and growing inequalities employing a global world historical and comparative perspective the 16 articles brought together in this volume deal with three central questions firstly the question of the spatio temporal evolution and variations of growing inequalities secondly the relative importance of globalization as compared to other factors explaining growing inequalities and thirdly institutional variations of inequality dynamics and globalization impacts christian suter is professor of economic sociology at the university of neuchÂ Â tel and president of the world society

globalization the interconnection of the world culturally socially politically and economically has generated intense theoretical and practical concerns is globalization inevitable what are the effects of globalization on social structures and individual perceptions what is the effect of globalization on societal level inequality america transformed globalization inequality and power examines these questions by analyzing the links among global processes and shifting patterns of stratification inequality and social mobility in the united states while many texts separate discussions of macro and micro level processes when examining globalization this book skillfully integrates general macro level processes with specific reference to the micro level effects of globalization in the u s exploring the critical dimensions of inequality class gender and immigration america transformed situates the u s experience within the broader global context and fleshes out the mechanism through which global processes affect social stratification by examining the social construction of globalization the authors identify the key policy challenges of globalization and some of the innovative community based responses to social inequality america transformed provides powerful insights into the contested dialectical relationship between global and local forces how globalization shapes stratification and inequality in the u s and how local communities attempt to mediate those changes

wealth and money which are meant to be sources of human happiness and facilitators of good social relations has instead become a monstrosity beyond human control the unbridled quest to make money and accumulate wealth as well as assign social signification on the basis of the outcome of individuals efforts in the process has ended up distorting existence and the meaning of being human itself this work brings together a collection of very provocative and challenging articles that confront the problems created by wealth can there be happiness when wealth is increasingly concentrated in fewer and fewer hands can wealth really bring happiness and what are the implications of the current trend to commodify everything for the project of human happiness the contributors to the volume argue that there is a need to change wealth accumulation and its core purpose they contend that from wealth accumulation the gear must change to wealth alleviation because the ways the rich become wealthy often correlate with the ways the number of the poor increase following from this they argue that rather than the current focus on poverty alleviation the focus should shift to wealth alleviation because a happy future for all lies in promoting human well being and removing human ill being through the spring wells of solidarity and humanity

bachelor thesis from the year 2016 in the subject politics topic globalization political economics grade 1 7 university of mannheim language english abstract in this paper we will try to determine if any of the theoretical camps are right and if so which one we

will first review current literature to clarify which arguments frame the respective pro and con attitudes towards globalization this will include theoretical approaches as well as previous studies done in the field we will then empirically analyze the issue ourselves with the newest available data to do so we will first need to establish practicable definitions of globalization poverty and inequality and then try to find relation ships between these factors lastly we will interpret our results to conclude we will summarize our findings and discuss any limitations of our research

the nature of globalization and the fallout from the international financial crisis have brought profound changes to societies and economies around the world this book documents that over the last two decades the growth of nonstandard and informal employment has led to greater inequalities this is partly explained by the fact that adjustment policies in the 1980s market liberalization policies in the 1990s and more recently globalization and anti poverty policies did not pay sufficient attention to policies for employment and income redistribution as a response to these trends this book recommends the development of clearer policies for employment and income redistribution these policies should now become an integral part of national and international economic policy making this is even more relevant in the current context of the international financial crisis as several elements of globalization especially the unfettered markets and the growing inequality have given cause to the current crisis and there is growing evidence that the employment human and social effects of the financial crisis will be felt well after an economic recovery has taken place especially if no corrective action is taken this volume will be of benefit to policymakers scholars and practitioners alike this book was published as a special issue of the journal of human development and capabilities

we are used to thinking about inequality within countries about rich americans versus poor americans for instance but what about inequality between all citizens of the world worlds apart addresses just how to measure global inequality among individuals and shows that inequality is shaped by complex forces often working in different directions branko milanovic a top world bank economist analyzes income distribution worldwide using for the first time household survey data from more than 100 countries he evenhandedly explains the main approaches to the problem offers a more accurate way of measuring inequality among individuals and discusses the relevant policies of first world countries and nongovernmental organizations inequality has increased between nations over the last half century richer countries have generally grown faster than poorer countries and yet the two most populous nations china and india have also grown fast but over the past two decades inequality within countries has increased as complex as reconciling these three data trends may be it is clear the inequality between the world s individuals is staggering at the turn of the twenty first century the richest 5 percent of people receive one third of total global income as much as the poorest 80 percent while a few poor countries are catching up with the rich world the differences between the richest and poorest individuals around the globe are huge and likely growing

one of the world's leading economists of inequality branko milanovic presents a bold new account of the dynamics that drive inequality on a global scale drawing on vast data sets and cutting edge research he explains the benign and malign forces that make inequality rise and fall within and among nations he also reveals who has been helped the most by globalization who has been held back and what policies might tilt the balance toward economic justice the data milanovic provides offer a clearer picture of great economic puzzles and his bold theorizing chips away at tired economic orthodoxies the economist milanovic has written an outstanding book informative wide ranging scholarly imaginative and commendably brief as you would expect from one of the world's leading experts on this topic milanovic has added significantly to important recent works by thomas piketty anthony atkinson and françois bourguignon ever rising inequality looks a highly unlikely combination with any genuine democracy it is to the credit of milanovic's book that it brings out these dangers so clearly along with the important global successes of the past few decades martin wolf financial times

two of the world's leading economists discuss fundamental issues of inequality and economic growth

what causes global inequality why should we be concerned about it is inequality getting worse or are there signs of improvement and progress this critical analysis of the current state of global inequality pushes beyond ideological prejudice and simplistic explanations to address these important questions offering a distinctive response to the many challenges in the area the text presents a holistic account of inequality by taking a multidisciplinary approach incorporating perspectives from sociology politics and economics recognising the influence of historical trends on inequality today and viewing inequality from a global perspective as well as a national one drawing on major theories of inequality and up to date evidence robert j holton guides readers through the complex issues at hand making this text a valuable resource for students of sociology global studies politics and development studies

abstract this paper studies the welfare implications of trade opening in a world in which trade raises aggregate income but also increases income inequality and in which redistribution needs to occur via a distortionary income tax transfer system we provide tools to characterize and quantify the effects of trade opening on the distribution of disposable income after redistribution we propose two adjustments to standard measures of the welfare gains from trade a welfarist correction inspired by the atkinson 1970 index of inequality and a costly redistribution correction capturing the efficiency costs associated with the behavioral responses of agents to trade induced shifts across marginal tax rates we calibrate our model to the united states over the period 1979

2007 using data on the distribution of adjusted gross income in public samples of irs tax returns as well as cbo information on the tax liabilities and transfers received by agents at different percentiles of the u s income distribution our quantitative results suggest that both corrections are nonnegligible trade induced increases in inequality of disposable income erode about 20 of the gains from trade while the gains from trade would be about 15 larger if redistribution was carried out via non distortionary means

models of trade and factor flows based on differences in factor endowments give clear predictions as to how globalization affects inequality and development models in which productivity differences between countries drive trade and factor flows gave more ambiguous predictions unfortunately productivity differences seem necessary to understand many though not all big picture globalization inequality and development outcomes the factor endowment predictions help give insight into how the north atlantic economy achieved decreasing inequality between countries in the last five decades they also give insight into the great migration of europeans from the land scarce old world to the land abundant new world in the late 19th and early 20th century accompanied by the predicted movements in land rental wage ratios however productivity differences appear to be an important facet of many globalization inequality and development episodes in the old globalization era they seem to be crucial to understand the lack of convergence between north atlantic economies the great divergence between rich and poor countries in that same era and the bias of capital flows towards rich countries in the new globalization era productivity differences are important to capture the very different performance of poor country regions in recent decades the flow of all factors of production towards the rich countries the low returns to physical and human capital in many poor countries and the perverse behavior of within country inequality in reaction to trade and capital flows

this publication sets out an empirical analysis of the impact of economic liberalisation and globalisation on inequality poverty and development including recent trends in economic growth income distribution and global inequalities and the comparative experiences of countries that have pursued different economic policies

what do we know about globalization issues of poverty income distribution examines the two fundamental arguments that are often raised against globalization that it produces inequality and that it increases poverty a lively and accessible argument about the impact and consequences of globalization from a leading figure in economics dehesa is chairman of the centre for economic policy research and a member of the group of thirty demonstrates the ways in which wealthy nations and developing countries alike have failed to implement changes that would result in a reversal of these social ills dispels the notion of the so called victim of globalization demonstrating how despite popular belief acceleration of globalization actually stands to reduce the levels of poverty and inequality worldwide asks whether increased technological economic and cultural change can save us from international income inequality and by extension further violence terrorism and war

this volume investigates the relationship between globalization inequality and social capital and reveals that although strongly related these ideas are also highly contested the authors elucidate the interactions between these concepts looking in detail at the conflicts and competitiveness which can arise at both the national and organizational level the authors examine public and private sector reforms in relation to globalization and inequality highlight the tensions between global governance and societal resistance and demonstrate how social capital contributes to systemic competitiveness more specifically a number of topical case studies which focus on a variety of issues clearly show the contested experiences of globalization inequality and social capital these include the introduction of iso standards the transformation of the czech republic reforms in the british national health service a comparison of the adoption of new forms of management in the us and the netherlands and the role of consultancies in regional economic development these studies highlight the formal and informal boundaries which exist between different groups in society although these boundaries do resist change at the same time they are flexible and so the authors argue can therefore play a significant role in shaping the dynamics of society and the economy the multidisciplinary approach and the variety of case studies will make this book required reading for institutional and

international economists political and social scientists and scholars of international relations management and organization

despite the fact that the globalization process tends to reinforce existing inequality structures and generate new areas of inequality on multiple levels systematic analyses on this very important field remain scarce hence this book approaches the complex question of inequality not only from different regional perspectives covering africa asia europe latin and northern america but also from different disciplinary perspectives namely cultural anthropology economics ethnology geography international relations sociology and political sciences the contributions are subdivided into three essential fields of research part i analyzes the socio economic dimension of global exclusion highlighting in particular the impacts of internationalization and globalization processes on national social structures against the background of theoretical concepts of social inequality part ii addresses the political dimension of global inequalities since the decline of the soviet union new regional powers like brazil china india and south africa have emerged creating power shifts in international relations that are the primary focus of the second part lastly part iii examines the structural and transnational dimension of inequality patterns which can be concretized in the rise of globalized national elites and the emergence of multinational networks that transcend the geographical and imaginative borders of nation states

this book explores trends of inequality and poverty in china identifies their causes and assesses their consequences analyzing in detail the regional personal variation in incomes measures of human wellbeing the gap between the coastal regions and the interior regions and urban rural disparity
