an extensive and authoritative introduction to property testing the study of super fast algorithms for the structural analysis of large quantities of data in order to determine global properties this book can be used both as a reference book and a textbook and includes numerous exercises

this book introduces the subject of valuation it comprehensively explains basic concepts which connect valuation with economics such as price value rent and property market origins characteristics and functions however the core issue is how the book handles the calculations required for property valuations the valuation formulae are classified in helpful ways which highlight main formulae and their variants relationships and functions many worked examples are used to demonstrate comprehensively the formulae s relationships and functions however innovation is introduced by calculations done in both a forward and backward manner through this method the answer to an initial worked example becomes a new question which is solved by a reverse calculation process to produce an answer corresponding to the initial question this particularly illuminating approach enables effective and enduring learning and understanding

it is now 25 years since the first edition of this book was written and the objectives of the fifth edition remain the same as those of the first edition that is to provide an introduction to and general background reading for the subject of property valuation it is directed not just at would be surveyors and valuers but at all those who may be interested in getting an understanding of property valuation

markets would not function unless supported by a legal framework that framework is no self contained exogenous structure it has evolved in response to the demands of economic activity there are laws made to modify or supplement market behavior in an attempt to produce the desired outcomes such laws are often called forth by political ambitions to change the distribution of wealth channeled through the political process thus economic life and law are strongly interrelated there is neither a pure economic system unaffected by law nor a legal system possible to understand without regard for its interplay with economic behavior still such a compartmentalization has dominated the perspectives of both economics and legal studies this invaluable book presents a unified picture of the full economic legal system based on results within the novel fields of new institutional economics and law and economics it is carefully argued and written in a non technical style albeit with no attempts to avoid deep theory it is primarily aimed at students of economics just beyond their introductory course and students of law in the middle or towards the end of their studies it can

also be of great use to both economists on a more advanced level and lawyers looking for a thought provoking survey of an exciting new sphere of ideas

annotated bibliography and guide to sources of information on business and management includes material relating to accounting taxation computers and management information systems insurance real estate business marketing personnel management labour relations etc

the tax on immovable property has been characterized as probably the most unpopular among tax instruments in part because it is salient and hard to avoid but economists continue to emphasize the virtues of the property tax owing to its relatively low efficiency costs benign impact on growth and high score on fairness it is therefore generally considered to be underutilized in most countries this paper takes stock of the arguments for using real property taxation and presents an updated data set for high and middle income countries to illustrate its use it also reflects the renewed and widespread interest in property tax reform globally and discusses the many policy and administrative issues that must be carefully considered as prerequisites for successful property tax reform
