this book is about explanation and experiment in a science of human action it aims to provide a philosophy of social psychological science that both embodies sound principles of scientific reasoning and is sensitive to the social psychological dimensions of human action the guiding principle of this book is the belief that the logical forms of causal explanation and experimental evaluation can be effectively employed in the scientific analysis of meaningful human action according to most accounts social psychological science has been in a more or less constant state of crisis for the past decades having been subject to a host of criticisms on moral political methodological and philosophical grounds many of these critiques have been directed against the still dominant conception of social psychological enquiry as a causal and objective scientific discipline that is closely

analogous to if not to be identified as a branch of the natural sciences thus many of the most vigorous debates have concerned the nature of explanation and the utility of experimentation in a social psychological discipline

presents key topics with an emphasis on experimental research and logic students will learn the importance of developing testable hypotheses how to evaluate new information critically and the impact of research on ourselves and our society

this book explores the development of ideas in psychology's past it is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline's future scientists in general are known to ignore their own history considering it to be a graveyard of failures in thinking in psychological science selected ideas of key figures in the cognitive comparative and developmental sides of psychology karl duncker karl bühler tamara dembo zing young kuo c lloyd morgan alexander chamberlain and arnold gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies yet the reality is just the opposite science is not just the product of heroes it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs still familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity this book analyzes the processes involved in the search for solutions to major theoretical problems of development kuo gesell action and cognition bühler bunker dembo and methodology morgan ultimately this is an exciting volume that reveals real science in the making thinking in psychological science will be of interest to students of the social sciences and intellectual history it is ideal for graduate and upper level undergraduate courses in psychology the sociology of science and cognitive science

psychological clinical science offers readers insightful appraisals of the most current theory and research in psychopathology and evidence based intervention it honors richard mcfall of indiana university a visionary psychological clinical scientist widely recognized for his unwavering advocacy for a science of clinical psychology and for the integration of clinical

psychology with other subdisciplines of psychological science with the publication of this volume psychology press and the association for psychological science are launching jointly a series of festschrifts that honor the careers and contributions of distinguished psychological scientists in keeping with mcfall's integrative approach to psychological science contributors to this volume include prominent clinical scientists cognitive scientists and neuroscientists the book details the historical and epistemological underpinnings of psychological clinical science addresses topics of applied significance offers an overview of several model research programs and suggests future directions in clinical science research application and training an accompanying dvd contains an interview with mcfall on his career and the clinical science movement which provides an inspiring and fascinating glimpse of his perspective on the past present and future of psychological clinical science

the computational theory of mind which views the brain as an information processor that operates on cognitive representations is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied evolutionary psychology ep is the application of evolutionary theory to understanding human behaviour and cognition unlike other core psychology topic areas such as personality learning or developmental psychology however ep is not defined by the subset of psychological phenomena it seeks to describe and understand it is instead defined by a specific meta theoretical perspective from which it seeks to potentially explain all psychological phenomena the central question posed by this volume is whether this over arching nature provides an opportunity for evolutionary approaches to offer an alternative meta theoretical perspective to the information processing representational view of brain function and behavior

giambattista vico 1668 1744 was an italian philosopher rhetorician and historian as one of the great thinkers of the enlightenment he exerted tremendous influence on the social sciences he was the first to stress cultural and linguistic dimensions in the development of both the human mind and social institutions although his ideas on the relationship

between mind and culture and his epistemology have inspired the work of many scholars in psychology his sizeable influence has been scarcely acknowledged the volume is organized in two sections the first locates vico in his historical context and in the landscape of contemporary human and social sciences the second part presents those of vico s concepts that seem promising for the development of a new way of looking at psychological phenomena in the book s conclusion luca tateo gathers the ideas of the volume s contributors to suggest future development of the psychological sciences this book aims to show how vico s insights can inspire future research in the psychological sciences it collects multidisciplinary contributions of leading international scholars that draw upon the thought of this original thinker collectively the contributors remind us of the legacy and continuing influence of this inspiring historical figure

since jan 1901 the official proceedings and most of the papers of the american association for the advancement of science have been included in science
