what can be understood by spatial transformation how does it manifest itself and what are the characteristics of transformation processes this research report addresses these questions and presents current research projects and approaches from an academic and practical planning perspective a central point of reference is the concept of a great transformation which stems from an expert report by the german advisory council on global change wbgu it outlines the profound changes in the economy and society towards sustainability that will become necessary in the future describing them as a great transformation likewise social upheavals also manifest themselves in space enabling spatial changes to be understood as spatial transformations however on a detailed level it remains unclear what is to be understood by spatial transformation processes and how they manifest themselves against the background of this need for further

research this research report addresses concrete issues in the research and shaping of spatial transformation processes the aim is to systematise the largely unordered or disordered knowledge of spatial transformation processes and to contribute to a common understanding of the associated concepts which can form the basis for further research and for the steering of these processes the articles on the following topics show how spatial and social transformation processes are mutually dependent and what opportunities and challenges inter and transdisciplinary research designs can offer in this context perspectives on transformation processes social and settlement structures in change regional development and innovation transformation processes in the so called global south new challenges for planning processes and stakeholders research on transformation the contributions to theoretical methodological and practical approaches are intended to stimulate a critical discussion on spatial transformation that is open to new interdisciplinary perspectives

clusters and sustainable regional development conceptualises the role of organised clusters in the transition towards sustainability it introduces a novel perspective on these clusters viewing them as deliberate collective actors within their environments that can become the driving force for transformation in their regions or nations the book draws upon the meta organisational perspective in cluster studies in contrast to traditional approaches this view suggests that clusters are not merely territories or geographical areas but organised entities as such they are defined as territorially anchored groups of independent organisations engaging in joint decision making pursuing system level goals and capable of purposive collective action this text introduces a new set of ideas and questions at the intersection of economic geography regional and cluster studies organisation and management policy and governance research it will appeal to researchers from these diverse fields seeking to further develop the meta organisational view of clusters as well as conceptualise their role in sustainability transitions this book will also be a useful guide for policymakers who have an interest in the dynamics of economic development and the transition towards sustainability

loss of biodiversity is one of the great environmental challenges facing humanity but unfortunately efforts to reduce the rate of loss have so far failed at the same time these efforts have too often resulted in unjust social outcomes in which people living in or near to areas designated for conservation lose access to their territories and resources in this book the author argues that our approach to biodiversity conservation needs to be more strongly informed by a concern for and understanding of social justice issues injustice can be a driver of biodiversity loss and a barrier to efforts at preservation conversely the pursuit of social justice can be a strong motivation to find solutions to environmental problems the book therefore argues that the pursuit of socially just conservation is not only intrinsically the right thing to do but will also be instrumental in bringing about greater success the argument for a more socially just conservation is initially developed conceptually drawing upon ideas of environmental justice that incorporate concerns for distribution procedure and recognition it is then applied to a range of approaches to conservation including benefit sharing arrangements integrated conservation and development projects and market based approaches such as sustainable timber certification and payments for ecosystem services schemes case studies are drawn from the author s research in rwanda uganda tanzania laos bolivia china and india

in the era of globalisation successful implementation of development

programmes requires an appropriate policy framework formulation of suitable plan and schemes and an effective delivery machinery indeed development is a process of mutual endeavour that calls for the involvement of people in all the segments of society this has necessitated the emergence of institutions which can function as a catalyst between the state and the civil society while still remaining independent of direct government intervention conversely past experiences of ngos suggest that availability of funds by itself is no panacea for the problems of poverty backwardness and low human development anywhere in the world this has provoked a series of questions related to the behaviour of ngos and their dynamics a phenomenon largely missing during the last two decades that is the most profound question is concerned with the very contribution of ngos the level and degree of implementation and identified alternative development and their level of sustainability thus no aspect of the development discourse can be carried forward today without paying attention to the work and the voice of ngos what is needed is not the creation of a completely new sustainability outlook but the establishment of a firm contemporary agenda that builds on some of the proven strengths of the community based agenda within this context the thinking about sustainability in particular ought to be built on a firmer and more strategically robust foundation than available now this book comprehensively reviews the key questions about aid and sustainability including the changing motives for and the purposes of providing aid the need for new aid targets distinctions among various recipient npos and the implications of globalisation in fact it is an attempt to understand the term sustainability in the context of globalisation through a process of transforming that understanding into organizational action although sustainability globalisation and organizational action can stand by themselves it may be a useful exercise to explore the sustainability concept under the globalisation setting drawing on its own experiences and best practices from india
