answer set programming asp is a declarative language tailored towards solving combinatorial optimization problems it has been successfully applied to e g planning problems configuration and verification of software diagnosis and database repairs however asp is not directly suitable for modeling problems with continuous domains such problems occur naturally in diverse fields such as the design of gas and electricity networks computer vision and investment portfolios to overcome this problem we study fasp a combination of asp with fuzzy logic a class of manyvalued logics that can handle continuity we specifically focus on the following issues 1 an important question when modeling continuous optimization problems is how we should handle overconstrained problems i e problems that have no solutions in many cases we can opt to accept an imperfect solution i e a solution that does not satisfy all the stated rules constraints however this leads to the question what imperfect solutions should we choose we investigate this question and improve upon the state of the art by proposing an approach based on aggregation functions 2 users of a programming language often want a rich language that is easy to model in however implementers and theoreticians prefer a small language that is easy to implement and reason about we create a bridge between these two desires by proposing a small core language for fasp and by showing that this language is capable of expressing many of its common extensions such as constraints monotonically decreasing functions aggregators s implicators and classical negation 3 a well known technique for solving asp consists of translating a program p to a propositional theory whose models exactly correspond to the answer sets of p we show how this technique can be generalized to fasp paving the way to implement efficient fuzzy answer set solvers that can take advantage of existing fuzzy reasoners

answer set programming asp is a programming methodology oriented towards combinatorial search problems in such a problem the goal is to find a solution among a large but finite number of possibilities the idea of asp came from research on artificial intelligence and computational logic asp is a form of declarative programming an asp program describes what is counted as a solution to the problem but does not specify an algorithm for solving it search is performed by sophisticated software systems called answer set solvers combinatorial search problems often arise in science and technology and asp has found applications in diverse areas in historical linguistic in bioinformatics in

robotics in space exploration in oil and gas industry and many others the importance of this programming method was recognized by the association for the advancement of artificial intelligence in 2016 when ai magazine published a special issue on answer set programming the book introduces the reader to the theory and practice of asp it describes the input language of the answer set solver clingo which was designed at the university of potsdam in germany and is used today by asp programmers in many countries it includes numerous examples of asp programs and present the mathematical theory that asp is based on there are many exercises with complete solutions
