presenting an ardent defence of charles darwin s theory of evolution this book offers a clear and comprehensive exposition of darwin s thinking michael ruse brings the story up to date examining the origins of life the fossil record and the mechanism of natural selection rival theories are explored from punctuated equilibrium to human evolution including the recently found hobbits *homo floresiensis* the philosophical and religious implications of darwinism are discussed including a discussion of creationism and its modern day offshoot intelligent design theory ruse draws upon the most recent discoveries writing with a minimum of jargon in order to appeal to all readers from professional biologists to those concerned that darwinism is a naturalistic religion that is forced on school children despite their own christian convictions openly revealing his own beliefs ruse presents readers with all the information and critical tools they need to make an informed decision on evolutionary theory

this edited book provides a global view on evolution education it describes the state of evolution education in different countries that are representative of geographical regions around the globe such as eastern europe western europe north africa south africa north america south america middle east far east south east asia australia and new zealand studies in evolution education literature can be divided into three main categories a understanding the interrelationships among cognitive affective epistemological and religious factors that are related to peoples views about evolution b designing implementing evaluating evolution education curriculum that reflects contemporary evolution understanding and c reducing antievolutionary attitudes this volume systematically summarizes the evolution education literature across these three categories for each country or geographical region the individual chapters thus include common elements that facilitate a cross cultural meta analysis written for a primarily academic audience this book provides a much needed common background for future evolution education research across the globe

a history of life in 100 fossils showcases 100 key fossils that together illustrate the evolution of life on earth iconic specimens have been selected from the renowned collections of the two premier natural history museums in the world the smithsonian institution washington and the natural history museum london the fossils have been chosen not only for their importance in the history of life but also because of the visual story they tell this stunning book is perfect for all readers because its clear explanations and beautiful photographs illuminate the significance of these amazing pieces including 500 million year old burgess shale fossils that provide a window into early animal life in the sea insects encapsulated by amber the first fossil bird *archaeopteryx* and the remains of our own ancestors

radiations or evolution in action we have just celebrated the darwin year with the double anniversary of his 200th birthday and 150th year of his masterpiece on the origin of species by means of natural selection in this work darwin established the factual evidence of biological evolution that species change over time and that new organisms arise by the splitting of ancestral forms into two or more descendant species however above all darwin provided the mechanisms by arguing convincingly that it is by natural selection as well as by sexual selection as he later added that organisms adapt to their environment the many discoveries since then have essentially confirmed and strengthened darwin's central theses with latest evidence for example from molecular genetics revealing the evolutionary relationships of all life forms through one shared history of descent from a common ancestor we have also come a long way to progressively understand more on how new species actually originate i.e. on speciation which remained darwin's mystery of mysteries as noted in one of his earliest transmutation notebooks since speciation is the underlying mechanism for radiations it is the ultimate causation for the biological diversity of life that surrounds us
