**Part 1 Basic Macroeconomic Concepts**

**11 Understanding GDP**

**Problem Type** Calculating GDP using the expenditure and income approaches

**Key Concept** GDP measures the total value of goods and services produced within a country during a given period

**Solution Strategy** Expenditure approach Sum the value of spending on final goods and services including consumption investment government spending and net exports

**Income approach** Sum the value of income earned from production including wages profits interest and rent

**Example** If consumption is 1000 investment is 200 government spending is 300 and net exports are 50 then GDP using the expenditure approach is  $1000 + 200 + 300 + 50 = 1450$

**Key Insight** Both approaches should yield the same GDP value highlighting the circular flow of income in the economy

**12 Measuring Inflation**

**Problem Type** Calculating inflation rates using various price indices

**Key Concept** Inflation refers to a sustained increase in the general price level of goods and services

**Solution Strategy**

**2 Consumer Price Index (CPI)** Tracks the average change in prices paid by urban consumers for a basket of consumer goods and services

**Producer Price Index (PPI)** Measures the average change in prices received by domestic producers for their output

**Example** If CPI in year 1 is 100 and CPI in year 2 is 105 then the inflation rate from year 1 to year 2 is  $\frac{105 - 100}{100} \times 100 = 5\%$

**Key Insight** Different price indices may provide slightly different inflation rates reflecting variations in the composition of their respective baskets

**13 Understanding Unemployment**

- Structural unemployment** Longterm unemployment resulting from mismatches between skills and available jobs
- Cyclical unemployment** Unemployment related to fluctuations in the business cycle

**22 Shifts in Aggregate Supply** Problem Type Identifying factors that shift the aggregate supply curve

**Key Insight** Aggregate supply is influenced by factors affecting the production capacity and costs of firms

**23 Equilibrium in the Macroeconomy** Problem Type Analyzing the shortrun and longrun equilibrium outcomes in the aggregate demand/aggregate supply model

**Key Concept** The intersection of the aggregate demand and aggregate supply curves determines the equilibrium price level and output level

**Solution Strategy** Shortrun equilibrium Reflects the current state of the economy potentially influenced by temporary factors Longrun equilibrium Represents the economy's potential output level where all resources are fully employed

**Example A** sudden increase in consumer confidence shifts the aggregate demand curve to the right leading to a shortrun equilibrium with higher output and prices However in the long run the economy adjusts to restore full employment with a higher price level but output returning to its potential

**Key Insight** The aggregate demand/aggregate supply model provides a framework for understanding how shocks to the economy can impact output employment and price levels in both the short and long run

**4 Part 3 Monetary and Fiscal Policy**
