with the rise of modern behavioural economics and increasing interest in subjective well being research the question of the relationship between economics and psychology has again been brought to the fore drawing on the history of economic thought this book explores the historical relationship between the two disciplines the book opens with a description of the primary philosophical foundations for early arguments supporting the interplay between economics and psychology both classical economists and other prominent pre marginalists writers are examined in this context the ensuing discussion explores the marginalist revolution and how

well known economists like Jevons and Edgeworth influenced by pre marginalist writers incorporated ideas and findings from psychology. The book then describes how following the so-called Paretian turn early neoclassical economists attempted to expel psychological concepts from economic analysis combined with the increasing formalization. The influence of the classical physics scientific ideal and the impact of positivism this methodological stance became dominant in modern mainstream economics. In contrast, non-mainstream traditions continued to acknowledge the significance of psychology in their economic analysis. This tradition includes *inter alia* the so-called old behavioural economics mainly of Herbert Simon and George Katona. The revival of psychology in economics came mainly with the emergence and development of new behavioural economics as a distinct branch during the last few decades. The trend was further assisted by the emergence of the economics of subjective well-being. Finally, the book briefly explores the state of the current debate concerning the relationship between economics and psychology. This book will be invaluable reading to anyone interested in the history of the study of economics and psychology as well as of great interest to students and scholars of history of economic thought, psychological economics, behavioural economics and the history and philosophy of social sciences.

This book applies institutional theory to the analysis of the post-Soviet Russian economy to bring to light the reasons why reforms have gone awry. Emphasis is put on the elements missed in the early blueprints of reforms constraints embodied in formal and especially informal institutions. Other aspects considered include the dominant model of power relationships and the networks of localized and personalized relationships among economic actors. The first part provides a general description of the core concepts of institutional theory including both the old institutionalism of T. Veblen and J. Commons and the new institutional economics of R. Coase, O. Williamson, and D. North. And in the second part, an institutional model of the post-Soviet Russian economy is developed. In the course of the analysis, the authors discuss such unresolved issues as post-privatization development in Russia and validity of the Coase theorem in the post-Soviet institutional context. Rich empirical data grounds the discussion throughout.

abundant with practical advice and ready to use teaching examples this dynamic guide will help both new and experienced instructors of principles of microeconomics to reconsider and refine their courses. This book examines the strategic and economic logic behind the Bangladesh-China-India-Myanmar (BCIM) regional cooperation according to estimates. BCIM covers approximately 9 percent of the world's mass and 40 percent of the world's population, spanning across four countries constituting the confluence of East, Southeast, and South Asia. It contributes about 13 percent to world trade but ironically only 5 percent to inter-regional trade. This volume compares the various approaches to cooperation: trade-led vs. project-led geo-political vs. geo-strategic, Sino-centric vs. India-led. The chapters explore the complex interplay of geo-economics and geo-politics associated with BCIM sub-regional cooperation in general and the BCIM Economic Corridor (BCIM EC) in particular. It points to the current challenges that impede globalisation and economic growth and critically reviews implications for the stakeholders institutional

frameworks and the spatial impact of the corridor especially on the underdeveloped regions the book discusses the geo political geo economic and geo strategic advantages that will accrue to the member countries once the sub regional cooperation becomes fully functional it advocates the adoption of best practices from similar sub regional groupings across the globe this book will be of great interest to scholars and researchers of politics and international relations geo politics strategic studies sub regional cooperation south asian studies india china relations foreign trade and economics besides those dealing with foreign policy and development cooperation it will especially benefit policymakers development agencies and strategic think tanks

networks pervade social and economic life and they play a prominent role in explaining a huge variety of social and economic phenomena standard economic theory did not give much credit to the role of networks until the early 1990s but since then the study of the theory of networks has blossomed at the heart of this research is the idea that the pattern of connections between individual rational agents shapes their actions and determines their rewards the importance of connections has in turn motivated the study of the very processes by which networks are formed in connections sanjeev goyal puts contemporary thinking about networks and economic activity into context he develops a general framework within which this body of research can be located in the first part of the book he demonstrates that location in a network has significant effects on individual rewards and that given this it is natural that individuals will seek to form connections to move the network in their favor this idea motivates the second part of the book which develops a general theory of network formation founded on individual incentives goyal assesses the robustness of current research findings and identifies the substantive open questions written in a style that combines simple examples with formal models and complete mathematical proofs connections is a concise and self contained treatment of the economic theory of networks one that should become the natural source of reference for graduate students in economics and related disciplines
