Sample Questions and Detailed Answers from NBME Surgery Form 2

Question 1: Emergency Management of Blunt Abdominal Trauma
Scenario: A 35-year-old male presents after a motor vehicle collision with abdominal pain, hypotension, and tachycardia. On examination, there is tenderness in the right upper quadrant.
Question: What is the next best step in management?
Answer: Immediate assessment with focused assessment with sonography for trauma (FAST) ultrasound, followed by surgical intervention if indicated.
Explanation:

- The patient shows signs of hypovolemic shock likely due to intra-abdominal injury.
- FAST ultrasound helps rapidly identify free fluid (blood) in the abdomen.
- If FAST is positive and the patient is unstable, prompt surgical exploration (laparotomy) is indicated.
- In stable patients, further imaging like CT scan may be performed.

Question 2: Management of Appendicitis
Scenario: A 22-year-old woman presents with right lower quadrant pain, nausea, and low-grade fever.
Question: What is the most appropriate initial management?
Answer: Surgical consultation for appendectomy, with preoperative antibiotics.
Explanation:

- Clinical presentation suggests acute appendicitis.
- The standard treatment is surgical removal of the appendix.
- Antibiotics are administered preoperatively to reduce infection risk.
- Imaging (ultrasound or CT) can confirm diagnosis but should not delay surgery if clinical suspicion is high.

Question 3: Postoperative Wound Infection Prevention
Scenario: A patient undergoes elective colorectal surgery. Postoperatively, the wound shows signs of infection.
Question: What measures

can reduce the risk of surgical wound infection? Answer: - Proper skin antisepsis before incision. - Use of prophylactic antibiotics within one hour before incision. - Maintaining normothermia during surgery. - Adequate blood glucose control, especially in diabetics. - Minimizing operative time and tissue trauma. - Proper wound closure techniques. Explanation: Adherence to infection control protocols significantly reduces postoperative wound infections.
