approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years worldwide there has been a move from a strategy of flood defence to one of flood risk management flood risk management includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur this change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences this is
