the book synthesizes research on the analysis of biomedical ontologies using formal concept analysis including through  
 auditing curation and enhancement as the evolution of biomedical ontologies almost inevitably involves manual work  
 formal methods are a particularly useful tool for ontological engineering and practice particularly in uncovering  
 unexpected bugs and content materials the book first introduces simple but formalized strategies for discovering  
 undesired and incoherent patterns in ontologies before exploring the application of formal concept analysis for  
 semantic completeness the book then turns to formal concept analysis a classical approach used in the mathematical

treatment of orders and lattices as an ontological engineering principle focusing on the structural property of ontologies with respect to its conformation to lattice or not non lattice the book helpfully covers the development of more efficient algorithms for non lattice detection and extraction required by exhaustive lattice non lattice analysis the book goes on to highlight the power and utility of uncovering non lattice structure for debugging ontologies and describes methods that leverage the linguistic information in concept names labels for ontological analysis it also addresses visualization and performance evaluation issues before closing with an overview and forward looking perspectives on the field this book is intended for graduate students and researchers interested in biomedical ontologies and their applications it can be a useful supplement for courses on knowledge representation and engineering and also provide readers with a reference for related scientific publications and literature to assist in identifying potential research topics all mathematical concepts and notations used in this book can be found in standard discrete mathematics textbooks and the appendix at the end of the book provides a list of key ontological resources as well as annotated non lattice and lattice examples that were discovered using the authors methods demonstrating how bugs are fixed by converting non lattices to lattices with minimal edit changes
