in part 3 of the trilogy characterising locally finite groups satisfying the strong sylow theorem for the prime p about the strong sylow theorem for the prime p in simple locally finite groups the strong sylow theorem for the prime p in projective special linear locally finite groups we continue the program begun in 10 to optimise along the way 1 its beautiful theorem about the first type an of infinite families of finite simple groups step by step to further types by proving it for the second type a $psl\ n$ we start with proving the conjecture 2 of 10 about the general linear groups over commutative locally finite fields stating that their rank is bounded in terms of their p uniqueness and then break down this insight to the special linear groups and the projective special linear psl groups over locally finite fields we close with suggestions for future research regarding the remaining five rank unbounded types the classical groups and the way 2 regarding the locally finite and p soluble groups and regarding augustin louis cauchy's and Évariste galois contributions to sylow theory in finite groups
