**Types of APICS CPIM Practice Questions**

Understanding the different types of practice questions is key to effective preparation. They can generally be categorized as follows:

- 1. Conceptual Questions** These questions assess understanding of fundamental principles, theories, and concepts such as inventory management, demand planning, and capacity planning. Example: "Which of the following best defines the Economic Order Quantity (EOQ)?"  
a) The order quantity that minimizes total inventory costs  
b) The maximum inventory level acceptable in a warehouse  
c) The reorder point when stock levels fall below safety stock  
d) The average number of units produced per hour  
Correct answer: a) The order quantity that minimizes total inventory costs
- 2. Calculation-Based Questions** These involve numerical problems requiring calculations based on formulas and data provided. Example: "Given a demand rate of 10,000 units per year, ordering costs of \$50 per order, and holding costs of \$2 per unit per year, what is the EOQ?" Solution involves plugging values into the EOQ formula:  $EOQ = \sqrt{2DS / H}$  where D = demand, S = ordering cost, H = holding cost per unit
- 3. Scenario-Based Questions** These questions present real-world situations, requiring candidates to apply knowledge to solve complex problems. Example: "A manufacturer faces unpredictable demand fluctuations. Which inventory management technique would be most appropriate?"  
a) Just-In-Time (JIT)  
b) Economic Order Quantity (EOQ)  
c) Safety Stock Management  
d) Fixed-Order Quantity System  
Correct answer: c) Safety Stock Management
- 4. True/False and Matching Questions** These facilitate quick assessment of understanding of definitions and concepts. Example: "Safety stock is used primarily to prevent stockouts caused by variability in demand or lead time."
