in this chapter we interrogate the debate between mathematicians and mathematics educators this debate is widely recognized in the united states for instance where the term math wars is often used in reference to the heated disagreements between mathematicians and mathematics educators such recognition might suggest that this topic itself has relevance both for the academy and for educational policy pertaining to mathematics education we propose to locate this debate unavoidably whenever and wherever mathematics education is written our aim is to show how the debate itself gives rise to the inscription mathematics education indeed we contend that mathematics education cannot be defined outside of or prior to the debate for it is precisely through the debate that it is constituted as a domain for deliberation the debate is more primordial than any epistémè or domain implied by it in other words we argue that mathematics and mathematics education do not exist epistemically prior to the debate in order to engage this issue we consider a transcription of a panel debate 2 between mathematicians and mathematics educators held in brazil in 1998 there is at least a double meaning for the word debate it may mean a meeting having a beginning and an end well localized in space and time and with a specific proposal or focus as in the following sentence i am going to see on tv the debate between bush and blair tomorrow at 5 pm
