the use of geophysical techniques has become an important tool in many geomorphological studies however the correct handling of geophysical instruments and the subsequent processing of the data they yield on the one hand and the description and interpretation of geomorphological settings to which they are applied on the other hand are difficult tasks without close cooperation of geophysicists and geomorphologists the accurate and effective use of geophysical techniques and their geophysical and geomorphological interpretation is often limited there are many text books in both disciplines but no single book addresses the interdisciplinary aspects of combining geophysics and geomorphology in addition to these papers we include a cd rom by karl josef sandmeier which contains i a test version of the software package reflexw programme for 2d and 3d processing and interpretation of gpr and seismic refraction reflection data incl demo data and handbook ii an introduction to the interpretation of seismic refraction data iii an introduction to modelling and tomography tools and iv a technical note on the use of wavefront inversion forward modelling and tomographic interpretation tools for seismic refraction data
