the world is going green sustainable technologies such as renewable energy and electric vehicles are increasingly becoming part of our daily life this dissertation fills the ensuing gap by providing an insight into the emerging german greentech industry one of the largest in the world it develops an integrated and interdisciplinary theoretical framework in which to assess the relationships between innovation growth and financing from a firm level perspective it then tests this framework empirically in essence the study finds that 1 innovative activity and corporate growth depend heavily on the availability of capital at the same time it appears that particularly innovative firms are more likely to face financial constraints 2 a lack of funds is very apparent for around a quarter of the firms investigated and seems most severe in the early part of the growth state where firms focus on commercializing existing products 3 government support programs only partially offset these effects

the central research objective of the dissertation is to assess the suitability of social responsible investments sris as well as alternative investments for the strategic asset allocation of german pension insurance funds pensionskassen using a vector error correction model we estimate the data generating process of the underlying input variables a bootstrap simulation allows generating future return paths of the underlying portfolios these return distributions will subsequently be used as input for different asset allocation strategies the empirical results of our research study offer valuable conclusions 1 sri structured portfolios consistently perform better than conventional portfolios 2 including alternative investments has a beneficial effect on the risk return distribution and 3 derivative overlay structures mitigate downside risk exposure without impacting average fund performance in terms of alternative allocation models 1 high equity portfolios lead to an increase in return volatility without sufficiently compensating investors with higher returns 2 hedging against price increases by engineering a portfolio with inflation suitable assets yields mixed results 3 a portfolio composition that combines derivative overlay strategies for both equities and corporate bonds and uses sri screened assets as underlying generates the best results
