this is a book that the author wishes had been available to him when he was student it reflects his interest in knowing like expert mathematicians the most relevant mathematics for theoretical physics but in the style of physicists this means that one is not facing the study of a collection of definitions remarks theorems corollaries lemmas etc but a narrative almost like a story being told that does not impede sophistication and deep results it covers differential geometry far beyond what general relativists perceive they need to know and it introduces readers to other areas of mathematics that are of interest to physicists and mathematicians but are largely overlooked among these is clifford algebra and its uses in conjunction with differential forms and moving frames it opens new research vistas that expand the subject matter in an appendix on the classical theory of curves and surfaces the author slashes not only the main proofs of the traditional approach which uses vector calculus but even existing treatments that also use differential forms for the same purpose

the neanderthals populated western europe from nearly 250 000 to 30 000 years ago when they disappeared from the archaeological record in turn populations of anatomically modern humans homo sapiens came to dominate the area seeking to understand the nature of this replacement which has become a hotly debated issue paul mellars brings together an unprecedented amount of information on the behavior of neanderthals his comprehensive overview ranges from the evidence of tool manufacture and related patterns of lithic technology through the issues of subsistence and settlement patterns to the more controversial evidence for social organization cognition and intelligence mellars argues that previous attempts to characterize neanderthal behavior as either modern or ape like are both overstatements we can better comprehend the replacement of neanderthals he maintains by concentrating on the social and demographic structure of neanderthal populations and on their specific adaptations to the harsh ecological conditions of the last glaciation mellars s approach to these issues is grounded firmly in his archaeological evidence he illustrates the implications of these findings by drawing from the methods of comparative socioecology primate studies and pleistocene paleoecology the book provides a detailed review of the climatic and environmental background to neanderthal occupation in europe and of the currently topical issues of the behavioral and biological transition from neanderthal to fully modern populations
