for calculating the isentropic efficiency of a steam turbine. This efficiency compares the actual work output to the ideal work output under isentropic constant entropy conditions. The formula involves calculating the enthalpy difference between the inlet and outlet steam conditions and then comparing this to the isentropic enthalpy drop. The detailed calculations and corrections for things like leakage and gland steam are precisely defined within the standard. Visual A simple diagram showing a steam turbine with inlet and outlet steam conditions along with enthalpy values could be included here.
