forensic genetic approaches for identification of human skeletal remains challenges best practices and emerging technologies provides best practices on processing bone samples for dna testing the book outlines forensic genetics tools that are available for the identification of skeletal remains in contemporary casework and historical archaeological investigations although the book focuses primarily on the use of dna for direct identification or kinship analyses it also highlights complementary disciplines often used in concert with genetic data to make positive identifications such as forensic anthropology forensic odontology and forensic art sculpting unidentified human remains are often associated with tragic events such as fires terrorist attacks natural disasters war conflicts genocide airline crashes homicide and human rights violations under oppressive totalitarian regimes in these situations extensive damage to soft tissues often precludes the use of such biological samples in the identification process in contrast bone material is the most resilient viable sample type for dna testing dna recovered from bone often is degraded and in low quantities due to the effects of human decomposition environmental exposure and the passage of time the complexities of bone microstructure and its rigid nature make skeletal remains one of the most challenging sample types for dna testing provides best practices on processing bone samples for dna testing presents detailed coverage of proper facilities design for skeletal remains processing selection of optimal skeletal elements for dna recovery specialized equipment needed preparation and cleaning of bone samples for dna extraction and more highlights complementary disciplines often used in concert with genetic data to make positive identifications such as forensic anthropology forensic odontology and forensic art sculpting

document in the subject computer sciences artificial intelligence language english abstract in today scenario there is abrupt usage of microblogging sites such as twitter for sharing of feelings and emotions towards any current hot topic any product services or any event such opinionated data needs to be leveraged effectively to get valuable insight from that data this research work focused on designing a comprehensive feature based twitter sentiment analysis

tsa framework using the supervised machine learning approach with integrated sophisticated negation handling approach and knowledge based tweet normalization system tns we generated three real time twitter datasets using search operators such as demonetization lockdown and 9pm9minutes and also used one publically available benchmark dataset semeval 2013 to assess the viability of our comprehensive feature based twitter sentiment analysis system on tweets we leveraged varieties of features such as lexicon based features pos based morphological ngrams negation and cluster based features to ascertain which classifier works well with which feature group we employed three state of the art classifiers including support vector machine svm decision tree classifier dtc and naive bayesian nb for our twitter sentiment analysis framework we observed svm to be the best performing classifier across all the twitter datasets except 9pm9minutes dtc turned out to be the best for this dataset moreover our svm model trained on the semeval 2013 training dataset outperformed the winning team nrc canada of semeval 2013 task 2 in terms of macro averaged f1 score averaged on positive and negative classes only though state of the art twitter sentiment analysis systems reported significant performance it is still challenging to deal with some critical aspects such as negation and tweet normalization
