this book gathers problems based on over twenty years of the indiana college mathematics competition a regional problem
solving contest for teams of undergraduates its problems and solutions are accessible to students in a standard college
curriculum not necessarily with olympiad level training problem sets form the core of part i covering myriad aspects of
algebra calculus number theory probability and geometry chapters are organized by year and an index allows easy navigation
through specific topics in part ii the reader finds detailed solutions to the exercises with revised solutions designed for a
didactical approach this book can be especially useful as a resource for problem solving courses in college mathematics or as
practice problems for graduate entrance exams this volume is a sequel to rick gillman s a friendly competition which
documented the first 35 years of the competition

a friendly mathematics competition tells the story of the indiana college mathematics competition icmc by presenting the

problems solutions and results of the first 35 years of the icmc the icmc was organized in reaction to the putnam exam its problems were to be more representative of the undergraduate curriculum and students could work on them in teams participation was originally restricted to the small private colleges and universities of the state but was later opened up to students from all of the schools in indiana the competition was quickly nicknamed the friendly competition because of its focus on solving mathematical problems which brought faculty and students together rather than on the competitive nature of winning organized by year the problems and solutions in this volume present an excellent archive of information about what has been expected of an undergraduate mathematics major over the past 35 years with more than 245 problems and solutions the book is also a must buy for faculty and students interested in problem solving the index of problems lists problems in algebraic structures analytic geometry arclength binomial coefficients derangements differentiation differential equations diophantine equations enumeration field and ring theory fibonacci sequences finite sums fundamental theorem of calculus geometry group theory inequalities infinite series integration limit evaluation logic matrix algebra maxima and minima problems multivariable calculus number theory permutations probability polar coordinates polynomials real valued functions riemann sums sequences systems of equations statistics synthetic geometry taylor series trigonometry and volumes

to celebrate the 400th anniversary of the founding of the geometry chair a meeting was held at the bodleian library in oxford and the talks presented at this meeting have formed the basis for this fully edited and lavishly illustrated book which outlines the first 400 years of oxford s savilian professors of geometry
