these proceedings showcase the best papers selected from more than 500 submissions introducing readers to the top research topics and the latest developmental trends in the theory and application of man machine environment system engineering. This research topic was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists Xuesen Qian. In a letter to Shengzhao Long from October 22nd 1993 Xuesen Qian wrote: "You have created a very important modern science and technology in China. This primarily focuses on the relationship between man, machine, and environment, studying the optimum combination of related man, machine, and environment systems. In this paradigm, 'man' refers to working people as the subject at the workplace, e.g.

operators decision makers machine is the general name for any object controlled by man including tools machinery computers systems and technologies and environment describes the specific working conditions under which man and machine interact e g temperature noise vibration hazardous gases etc in turn the three goals of optimization are to ensure safety efficiency and economy in this context these proceedings present interdisciplinary studies on the concepts and methods of physiology psychology system engineering computer science environmental science management education and other related disciplines they offer a valuable resource for all researchers and professionals whose work involves interdisciplinary areas touching on mmese subjects

this book presents the proceedings of the 22nd congress of the international ergonomics association iea 2024 held on august 25 29 2024 by highlighting the latest theories and models as well as cutting edge technologies and applications and by combining findings from a range of disciplines including engineering design robotics healthcare management computer science human biology and behavioral science it provides researchers and practitioners alike with a comprehensive timely guide on human factors and ergonomics it also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance while at the same time promoting the health safety and wellbeing of individuals the proceedings include papers from researchers and practitioners scientists and physicians institutional leaders managers and policy makers that contribute to constructing the human factors and ergonomics approach across a variety of methodologies domains and productive sectors this volume includes papers addressing the following topics working with computer systems human modelling and simulation neuroergonomics biomechanics affective design anthropometry advanced imaging

a joint meeting of the food and agriculture organization of the united nations fao panel of experts on pesticide residues in food and the environment and the world health organization who core assessment group on pesticide residues jmpr was held in geneva switzerland from 17 to 26 september 2019 the fao panel members met in preparatory sessions from 12 to 16 september the meeting evaluated 30 pesticides including eight new compounds and three compounds that were re evaluated for toxicity or residues or both within the periodic review programme of the codex committee on pesticide residues ccpr the meeting established adis and arfds estimated maximum residue levels and recommended them for use by ccpr and estimated supervised trials median residue stmr and highest residue hr levels as a basis for estimating dietary exposures

the technologies applied in design studies vary from basic theories to more application based systems intelligence engineering also plays a significant role in design sciences such as computer aided industrial design human factor design and greenhouse design and intelligent engineering technologies such as computational technologies sensing technologies and video detection encompass both theory and application perspectives being multidisciplinary in nature intelligence engineering promotes cooperation exchange and discussion between organizations and researchers from diverse fields this book presents the proceedings of dsie 2022 the international symposium on design studies and intelligence engineering held in hangzhou china on 29 30 october 2022 this annual conference proves a platform for professionals and researchers from industry and academia to exchange and discuss recent advances in the field

of design studies and intelligence engineering inviting renowned experts from around the world to speak on their specialist topics and allowing for in depth discussion with presenters the 189 submissions received were each carefully reviewed by 3 or 4 referees and the 62 papers accepted for presentation and publication were selected based on their scores papers cover a very wide range of topics from the design of a bachelor apartment or a children's backpack for healthy spine development to interpretable neural symbol learning methods and design elements extraction from point cloud datasets using deep enhancement learning offering a varied overview of recent developments in design and intelligence engineering this book will be of interest to all those working in the field

time perception in the range of milliseconds to a few seconds is essential for many important sensory and perceptual tasks including speech perception motion perception motor coordination and cross modal interaction for the brain to be in synchrony with the environment the physical differences in the speeds of light and sound as well as stimuli from other modalities such as odors must be processed and coordinated pöppel bao 2014 bao et al 2015 time is a subjective feeling that is modulated by emotional states which trigger temporal distortions temporal dilation vs contraction wittmann et al 2014 hence give rise to subjective time that may be different to event time as initially registered in the brain recent research suggests that time perception in a multisensory world is subject to prior task experience and shaped by statistical learning processes humans are active learners that is the engagement of the own body in a timing task within a perceptual action loop will make a noticeable difference in timing performance as compared to when humans only passively perceive the same perceptual scenario bao et al 2015 chen vroomen 2013 this research topic of sub and supra second timing brain learning and development has integrated sixteen submissions of novel research on sub and supra timing we have categorized the papers in this topic into the following four themes from which we can deduce trends of research about multisensory timing in the sub and supra second range sensory timing interaction and reliability adaptive representation of time learning and temporal prediction sensorimotor synchronization embodiment and coordination perspective of psychological moment and temporal organization overall the collections in sub and supra second timing brain learning and development show some recent trends and debates in multisensory timing research as well as provide a venue to inspire future work in multisensory timing
