this new volume brings together a wealth of information on event related potentials of the brain an area which has grown increasingly important as researchers attempt to understand the workings of the human brain using noninvasive imaging techniques the volume addresses the neurophysiological bases of erps brain stems and cognition as well as applications it will be of interest to a wide range of researchers in perceptual cognitive and motor behavior

this study involved the collection of real world driving data from a small sample of drivers thought to be at heightened risk to identify periods of drowsiness and inattention data included a variety of engineering measures including video of the driver and the road scene one objective of the study was the identification of periods of drowsiness and inattention documented on video that would be made available for public education and outreach programs a second objective was to validate in a naturalistic driving setting the drowsy driver detection algorithms developed by wierwille et al in a simulator environment participants personal vehicles were instrumented with the microdas instrumentation system and all driving during the data collection was fully discretionary and independent of study objectives the study thus offered the opportunity to implement highly unobtrusive data collection in subjects own vehicles with the absence of an experimenter in an effort to gather naturalistic data with a minimum of experimental artifacts results highlight the importance of lanekeeping variation as a key predictor variable for detecting drowsiness while driving although the drowsy detection algorithm did not perform as well as in the simulator studies an attempt to relate algorithm results to the prediction of driver inattention was inconclusive the results are discussed in terms of theoretical and procedural issues associated with inattention drowsiness and driver responses to false positive epochs it is suggested that the use of a multiplicity of approaches for addressing drowsy and inattentive driving would be most effective and recommendations are made for future research on both technological and behavioral interventions

a chilling account of the tradeoff we are willing to make between interactive media technologies and the power of others to watch over and control us this brave new world of electronic marketing and consumption actually lulls consumers into blissful ignorance of how that usage can be and is being monitored
