organically converge on a consensus that yields self evident practical results furthermore the english then tend to assume that their own position reflects that consensus other stakeholders are not seen as having legitimate but distinct expertise and interests but are rather viewed as being stupid and or immoral for ignoring self evident pragmatic truths compromise is therefore less likely and land management practices become entrenched and resistant to innovation and improvement through a detailed ethnographic study of the norfolk broads this book explores how environmental policy and land management in rural areas could be more effective if a truly common sense was restored in the way we manage our shared environment using academic and lay deployments of common sense as a route into the political economy of rural environments this book will be of great interest to scholars and students of socio cultural anthropology sociology human geography cultural studies social history and the environmental humanities
