this book addresses mathematics in a wide variety of applications ranging from problems in electronics energy and the environment to mechanics and mechatronics using the classification system defined in the eu framework programme for research and innovation h2020 several of the topics covered belong to the challenge climate action environment resource efficiency and raw materials and some to health demographic change and wellbeing while others belong to europe in a changing world inclusive innovative and reflective societies the 19th european conference on mathematics for industry ecmi2016 was held in santiago de compostela spain in june 2016 the proceedings of this conference include the plenary lectures ecmi awards and special lectures mini symposia including the description of each mini symposium and contributed talks the ecmi conferences are organized by the european consortium for mathematics in industry with the aim of promoting interaction between academy and industry leading to innovation in both fields and providing unique opportunities to discuss the latest ideas problems and methodologies and contributing to the advancement of science and technology they also encourage industrial sectors to propose challenging problems where mathematicians can provide insights and fresh perspectives lastly the ecmi conferences are one of the main forums in which significant advances in industrial mathematics are presented bringing together prominent figures from business science and academia to promote the use of innovative mathematics in industry

ecmi the european consortium for mathematics in industry is the european brand associated with applied mathematics for industry and organizes highly successful biannual conferences in this series the ecmi 2010 the 16th european conference on mathematics for industry was held in the historic city hall of wuppertal in germany it covered the mathematics of a wide range of

applications and methods from circuit and electromagnetic device simulation to model order reduction for chip design uncertainties and stochastics production fluids life and environmental sciences and dedicated and versatile methods these proceedings of ecmi 2010 emphasize mathematics as an innovation enabler for industry and business and as an absolutely essential pre requisite for europe on its way to becoming the leading knowledge based economy in the world

this book should illustrate the impact of collaborations between mathematics and industry it is both an initiative of and coordinated by the german committee for mathematical modeling simulation and optimization komso this publication aims at comparing the state of the art at the intersection of mathematics and industry as well as the demands for future development of science and technology in germany and beyond each contribution addresses the importance of mathematics in innovation by means of introducing a successful cooperation with an industrial partner in order to display the wide range of industrial sectors where the use of mathematics is the crucial factor for success but also show the variety of mathematical areas involved in these activities the success stories introduced in this volume will be supplemented by appropriate illustrations it is the goal of this publication to highlight cooperation between mathematics and industry as a two way technology and knowledge transfer providing industry with solutions and mathematics with new research topics and inspiring new methodologies

this volume highlights successful projects in which academic mathematicians in the united kingdom got involved with solving problems in industry for which mathematics was essential it contains a wide range of articles in areas ranging from music composition to climate change which describe successful collaborations between mathematicians statisticians and industry the impact that the work had on the companies involved and on people s everyday lives is included in each article the book conveys to the non expert some of the many ways that mathematics and statistics have contributed to economic growth and societal well being

this book presents a collection of papers emphasizing applications of mathematical models and methods to real world problems of relevance for industry life science environment finance and so on the biannual conference of ecmi the european consortium of mathematics in industry held in 2014 focused on various aspects of industrial and applied mathematics the five main topics addressed at the conference were mathematical models in life science material science and semiconductors mathematical methods in the environment design automation and industrial applications and computational finance several other topics have been treated such as among others optimization and inverse problems education numerical methods for stiff pdes model reduction imaging processing multi physics simulation mathematical models in textile industry the conference which brought together applied mathematicians and experts from industry provided a unique opportunity to exchange ideas problems and methodologies bridging the gap between mathematics and industry and contributing to the advancement of science and technology the conference has included a presentation of eu maths in european network of mathematics for industry and innovation a recent joint initiative of ecmi and ems the proceedings from this conference represent a snapshot of the current activity in industrial mathematics in europe and are highly relevant to anybody interested in the latest applications of mathematics to industrial problems

the 1990 cime course on mathematical modelling of industrial processes set out to illustrate some advances in questions of industrial mathematics i e of the applications of mathematics with all its academic rigour to real life problems the papers describe the genesis of the models and illustrate their relevant mathematical characteristics among the themes dealt with are thermally controlled crystal growth thermal behaviour of a high pressure gas discharge lamp the sessile drop problem etching processes the batch coil annealing process inverse problems in classical dynamics image representation and dynamical systems scintillation in rear projections screens identification of semiconductor properties pattern recognition with neural networks contents h k kuiken mathematical modelling of industrial processes b forte inverse problems in mathematics
