an authorised reissue of the long out of print classic textbook advanced calculus by the late dr lynn loomis and dr shlomo sternberg both of harvard university has been a revered but hard to find textbook for the advanced calculus course for decades this book is based on an honors course in advanced calculus that the authors gave in the 1960 s the foundational material presented in the unstarred sections of chapters 1 through 11 was normally covered but different applications of this basic material were stressed from year to year and the book therefore contains more material than was covered in any one year it can accordingly be used with omissions as a text for a year s course in advanced calculus or as a text for a three semester introduction to analysis the prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view together with some acquaintance with linear algebra the reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication as possible introductory texts we mention differential and integral calculus by r courant calculus by t apostol calculus by m spivak and pure mathematics by g hardy the reader should also have some experience with partial derivatives in overall plan the book divides roughly into a first half which develops the calculus principally the differential calculus in the setting of normed vector spaces and a second half which deals with the calculus of differentiable manifolds
