this is the second of a two part guide to quantitative analysis using the ibm spss statistics software package this volume focuses on multivariate statistical methods and advanced

forecasting techniques more often than not regression models involve more than one independent variable for example forecasting methods are commonly applied to aggregates such as inflation rates unemployment exchange rates etc that have complex relationships with determining variables this book introduces multivariate regression models and provides examples to help understand theory underpinning the model the book presents the fundamentals of multivariate regression and then moves on to examine several related techniques that have application in business orientated fields such as logistic and multinomial regression forecasting tools such as the box jenkins approach to time series modeling are introduced as well as exponential smoothing and naïve techniques this part also covers hot topics such as factor analysis discriminant analysis and multidimensional scaling mds

comprehensive remote sensing nine volume set covers all aspects of the topic with each volume edited by well known scientists and contributed to by frontier researchers it is a comprehensive resource that will benefit both students and researchers who want to further their understanding in this discipline the field of remote sensing has quadrupled in size in the past two decades and increasingly draws in individuals working in a diverse set of disciplines ranging from geographers oceanographers and meteorologists to physicists and computer scientists researchers from a variety of backgrounds are now accessing remote sensing data creating an urgent need for a one stop reference work that can comprehensively document the development of remote sensing from the basic principles modeling and practical algorithms to various applications fully comprehensive coverage of this rapidly growing discipline giving readers a detailed overview of all aspects of remote sensing principles and applications contains layered content with each article beginning with the basics and then moving on to more complex concepts ideal for advanced undergraduates and academic researchers includes case studies that illustrate the practical application of remote sensing principles further enhancing understanding

artificial intelligence ai has featured widely in the news recently it is vital to the continued development of computer science and informatics and is indispensable for the effective functioning of a multitude of systems in fields such as medicine economics linguistics philosophy psychology and logical analysis as well as industry this book presents the proceedings of the 13th scandinavian conference on artificial intelligence scai 2015 held in halmstad sweden in november 2015 scai is the main biennial conference for the ai research communities of scandinavia but also attracts the attendance of a wide range of international participants the book features 17 accepted papers from the conference as well as extended abstracts describing the work of six ph d students who presented their research in progress to a panel of experts in the doctoral symposium which forms part of the conference a wide range of topics are covered including machine learning data mining logical reasoning robotics and planning and the papers included here focus on both the theory and practical applications of ai the book will be of interest to all those wishing to keep abreast of the latest developments in the field of ai

marine ecosystems offer several benefits to human communities to make sustainable use of these benefits it is necessary to elucidate and conserve marine ecology and strive to maintain a sustainable natural resource management program for this reason understanding the diversity and behavior of both macro ecosystems and micro ecosystems are crucial monitoring artificial materials and microbes in marine ecosystems explores microbial roles and their interaction with artificial materials in marine environments after starting with simple topics for beginners chapters explore methods to detect microorganisms in marine ecosystems and interactions of marine organisms with artificial materials the sequential progression into advanced topics makes it easier to understand how to solve the reduction in marine ecosystem viability caused by adverse events readers are provided with useful information for rehabilitating marine environments to make them sustainable for communities topics are covered in 3 parts part 1 is an introductory guide to marine ecosystems and environmental monitoring assessment readers are introduced to coral reef ecosystems algal blooms and the role of environmental monitoring services in maintaining and restoring the quality of marine environments this is followed by examples of sustainable marine environment assessment part 2 provides information about methods to detect microorganisms viruses and bacteria and evaluate marine environments this includes sample enrichment methods electrochemical analysis and single cell imaging techniques the highly sensitive and specific techniques presented in the book are applicable in a wide variety of situations part 3 is dedicated to interactions between artificial metallic materials and

microorganisms in marine environments chapters in this section share results from several experiments conducted to separate microorganisms and biofilms from such environments this book is intended primarily for marine ecologists microbiologists environmental engineers and engineers associated with industrial projects this book is also useful as a text for undergraduate and graduate level courses in marine biology ecology and microbiology

the primary goals of this project for jto and onr grant n00014 07 1 1060 were to further develop extinction imagers for use in the ocean environment and to extend the capabilities into the short wave ir swir extinction imaging is a method for determining the effective extinction coefficient over an extended path using a sensor at one end of the path it uses calibrated imagers to acquire the relative radiance of a dark target near the other the end of the path and the horizon sky in the direction of the dark target it is completely passive and thus covert and the hardware is robust and relatively inexpensive it uses rigorous equations which determine the extinction coefficient from the measured apparent contrast of the radiance of the dark target with respect to the horizon sky the project was very successful we found that the ocean surface could readily be used as a dark target in red and swir wavelengths both the red and the swir measurement results were excellent for daytime comparisons with standard instruments as well as uncertainty analysis indicated that extinction imagers provide better measurements of the atmospheric extinction losses over extended paths than other methods of which we are aware our secondary goals were to address the night regime and to address slanted paths above the horizontal regarding night we found that the visible sensor acquired excellent data but the ocean surface was not a good dark target in our wavelengths recommendations on the handling of night are given in the report regarding the lines of sight above the horizon we developed a slant path algorithm that determines beam transmittance it performed very well recommendations are made regarding integration of these techniques for military applications
