this long awaited volume written specifically for petroleum workers explores the fundamental concepts of rock mechanics along with various petroleum related applications emphasis is placed on the weak sedimentary rocks which normally fall between traditional rock mechanics and soil mechanics elasticity failure mechanics acoustic wave propagation and geological aspects of rock materials are all detailed application areas discussed include stability during drilling sand production fracturing and reservoir compaction methods for acquisition of data from field and laboratory analyses are also described engineers and geologists in the petroleum industry will find this book a powerful resource in providing a basis of rock mechanical knowledge a knowledge which can greatly assist in the understanding of field behaviour design of test programmes and the design of field operations

this book comprises two parts the first part deals with some aspects of wastewater treatment encompassing various types of technologies for treating wastewater and evaluation the technologies biochemical as well as chemical including evaluation of technologies are also discussed part 2 is on solid waste management it includes both municipal and industrial waste management the book is of interest to researchers and practitioners in the field of water resources hydrology environmental resources agricultural engineering watershed management earth sciences as well as those engaged in natural resources planning and management graduate students and those wishing to conduct further research in water and environment and their development and management find the book to be of value

this second volume of surface operations in petroleum production complements and amplifies volume i which appeared in 1987 and covered several aspects of oilfield technology this second volume presents a detailed theoretical and practical exposition of surface oilfield practices including gas flow rate measurement cementing fracturing acidizing and gravel packing in today's era of specialization these operations are generally left to service companies denying field engineers and company managers direct detailed knowledge of the specific surface and subsurface operations this book presents a comprehensive analysis which may be used by field engineers to analyze technical problems specify the required surface and subsurface operations and closely supervise the service company's work and post treatment operation of the well another subject which has great economic consequences in all oilfields is corrosion of equipment the book presents a comprehensive analysis of the theory of corrosion in the oilfield and

methods that have proved effective for the retardation or elimination of corrosion quality control of injection waters in then covered three more topics are addressed the first is offshore technology which is presented with reference to onshore oilfield operations making a lucid presentation for field engineers who have no practical knowledge of the subject the second is pollution control an area of oilfield management which has assumed widespread importance in recent years the last topic covered is the subject of underground storage of gas and oil underground fuel storage and retrieval is an active area of oilfield production management that utilizes the technology presented in this entire treatise finally the technology of testing petroleum products and sample experiments for junior and senior petroleum engineering students are presented this two volume comprehensive treatise on modern oilfield technology thus provides not only a complete reference for field managers engineers and technical consultants but will also serve academic needs in advanced studies of petroleum production engineering

groundwater is an essential and vital natural resource of british columbia it is the sole source of drinking water for over 20 of the province and plays a crucial role in the maintenance of many ecosystems within the province by providing a source of recharge to surface waters in recent years british columbia s groundwater resources have come under increasing threat of contamination from a variety of sources including agricultural activities land application of wastes septic systems municipal landfills leaking underground storage tanks and industrial activities the key to ensuring a safe ground water supply is to prevent contamination from occurring in the first place through the implementation of groundwater protection measures to address this issue a review of protection measures used in jurisdictions outside of british columbia was carried out in order to identify those measures that could be applicable to the fraser basin
