3. I'm confused about the role of DNA in inheritance. Can you clarify? DNA serves as the blueprint of life, containing the genetic instructions for building and maintaining an organism. It acts as a template for protein synthesis, which ultimately dictates an individual's traits. During inheritance, parents pass on their DNA to their offspring, ensuring the transmission of genetic information across generations.

4. I'm finding it hard to grasp the different trophic levels in an ecosystem. Can you give an example? Imagine a simple ecosystem with grass, a rabbit, and a fox.
