dna nanoscience from prebiotic origins to emerging nanotechnology melds two tales of dna one is a look at the first 35 years of dna nanotechnology to better appreciate what lies ahead in this emerging field the other story looks back 4 billion years to the possible origins of dna which are shrouded in mystery the book is divided into three parts comprised of 15 chapters and two brief interludes part i includes subjects underpinning the book such as a primer on dna the broader discipline of nanoscience and experimental tools used by the principals in the narrative part ii examines the field of structural dna nanotechnology founded by biochemist crystallographer nadrian seeman that uses dna as a construction material for nanoscale structures and devices rather than as a genetic material part iii looks at the work of physicists noel clark and tommaso bellini who found that short dna nanodna forms liquid crystals that act as a structural gatekeeper orchestrating a series of self assembly processes using nanodna this led to an explanation of the polymeric structure of dna and of how life may have emerged from the prebiotic clutter
