the popularity of the internet and the affordability of it hardware and software  
have resulted in an explosion of applications architectures and platforms  
workloads have changed many applications including mission critical ones are  
deployed on a variety of platforms and the system z design has adapted to this  
change it takes into account a wide range of factors including compatibility and  
investment protection to match the it requirements of an enterprise this ibm  
redbooks publication discusses the ibm zenterprise system an ibm scalable  
mainframe server ibm is taking a revolutionary approach by integrating  
separate platforms under the well proven system z hardware management  
capabilities while extending system z qualities of service to those platforms the  
zenterprise system consists of the ibm zenterprise 114 central processor  
complex the ibm zenterprise unified resource manager and the ibm zenterprise  
bladecenter extension the z114 is designed with improved scalability  
performance security resiliency availability and virtualization the z114  
provides up to 18 improvement in uniprocessor speed and up to a 12 increase  
in total system capacity for z os z vm and linux on system z over the z10tm  
business class bc the zbx infrastructure works with the z114 to enhance system  
z virtualization and management through an integrated hardware platform that  
spans mainframe power7tm and system x technologies the federated capacity  
from multiple architectures of the zenterprise system is managed as a single  
pool of resources integrating system and workload management across the  
environment through the unified resource manager this book provides an  
overview of the zenterprise system and its functions features and associated  
software support greater detail is offered in areas relevant to technical
