with a continuously increasing desire for natural and comfortable human machine interaction the acoustic interface of any terminal for multimedia or telecommunication services is challenged to allow seamless and hands free audio communication sound capture for human machine interfaces introduces the practical aspects of microphone array signal processing and presents various combinations of beamforming and acoustic echo cancellation

the subject of kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development with many old problems and conjectures close to resolution

this volume proceedings of the warwick workshop in september 2001 contains expositions of many of these breakthroughs including minsky's lectures on the first half of the proof of the ending lamination conjecture the bers density conjecture by brock and bromberg the tameness conjecture by kleineidam and soule the state of the art in cone manifolds by hodgson and kerckhoff and the counter example to thurston's $k=2$ conjecture by epstein marden and markovic it also contains jørgensen's famous paper on pairs of once punctured tori in print for the first time the excellent collection of papers here will appeal to graduate students who will find much here to inspire them and established researchers who will find this valuable as a snapshot of current research

this present volume is the proceedings of the 18th international conference on nearrings and near fields held in hamburg at the universität der bundeswehr hamburg from july 27 to august 03 2003 this conference was organized by momme johs thomsen and gerhard saad from the universität der bundeswehr hamburg and by alexander kreuzer hubert kiechle and wen ling huang from the universität hamburg it was already the second conference on nearrings and near fields in hamburg after the conference on nearrings and near fields at the same venue from july 30 to august 06 1995 the conference was attended by 57 mathematicians and many accompanying persons who represented 16 countries from all five continents the first of these conferences took place 35 years earlier in 1968 at the mathematisches forschungsinstitut oberwolfach in the black forest in germany this was also the site of the second third fourth and eleventh conference in 1972 1976 1980 and 1989 the other twelve conferences held before the second hamburg conference took place in nine different countries for details about this and moreover for a general historical overview of the development of the subject we refer to the article on the beginnings and developments of near ring theory by gerhard betsch [3] in the proceedings of the 13th conference in fredericton new brunswick canada during the last fifty years the theory of nearrings and related algebraic structures like near fields near modules near algebras and seminearrings has developed into an extensive branch of algebra with its own features

the problem of viability of hybrid systems is considered in this work a model for a hybrid system is developed including a means of including three forms of uncertainty transition dynamics structural uncertainty and parametric uncertainty a computational basis for viability of hybrid systems is developed and applied to three control law classes an approach is developed for robust viability based on two extensions of the controllability operator the three tank example is examined for both the viability problem and robust viability problem the theory is applied through simulation to an active magnetic bearing system and to a batch polymerization process showing that viability can be satisfied in practice the problem of viable attainability is examined based on the controllability operator approach introduced by nerode and colleagues lastly properties of the controllability operator are presented

colloids are systems comprised of particles of mesoscopic size suspended in a liquid they have recently been attracting increased attention from scientists and engineers due to the fact that they are nowadays present in many industrial products such as paints oil additives electronic ink displays and drugs colloids also serve as versatile model systems for phenomena and structures from solid state physics surface science and statistical mechanics and can easily be studied using tabletop experiments to provide insight into

processes not readily accessible in atomic systems this book presents the lectures delivered at the 2012 enrico fermi school physics of complex colloids held in varennna italy in july 2012 the school addressed experimental theoretical and numerical results and methods and the lectures covered a broad spectrum of topics from the starting point of the synthesis of colloids and their use in commercial products the lectures review the state of the art of colloidal science in a pedagogical way discussing both the basics and the latest results and this book will serve as a reference for both students and experts in this rapidly growing field
