luciano floridi presents an innovative approach to philosophy conceived as conceptual design he explores how we make transform refine and improve the objects of our knowledge his starting point is that reality

provides the data to be understood as constraining affordances and we transform them into information like semantic engines such transformation or repurposing is not equivalent to portraying or picturing or photographing or photocopying anything it is more like cooking the dish does not represent the ingredients it uses them to make something else out of them yet the reality of the dish and its properties hugely depend on the reality and the properties of the ingredients models are not representations understood as pictures but interpretations understood as data elaborations of systems thus luciano floridi articulates and defends the thesis that knowledge is design and philosophy is the ultimate form of conceptual design although entirely independent of floridi s previous books the philosophy of information oup 2011 and the ethics of information oup 2013 the logic of information both complements the existing volumes and presents new work on the foundations of the philosophy of information
