this book is the first in english being entirely dedicated to miniature joule thomson cryocooling the category of joule thomson jt cryocoolers takes us back to the roots of

cryogenics in 1895 with figures like Linde and Hampson the cold finger of these cryocoolers is compact lacks moving parts and sustains a large heat flux extraction at a steady temperature potentially they cool down unbeatably fast for example cooling to below 100 K minus 173 Celsius might be accomplished within only a few seconds by liquefying argon a level of about 120 K can be reached almost instantly with krypton indeed the species of coolant plays a central role dictating the size the intensity and the level of cryocooling it is the JT effect that drives these cryocoolers and reflects the deviation of the real gas from the ideal gas properties the nine chapters of the book are arranged in five parts the common principle of cryocoolers shared across the broad variety of cryocooler types theoretical aspects the JT effect and its inversion cooling potential of coolants the liquefaction process sizing of heat exchangers level of pressurization discharge of pressure vessels practical aspects modes of operation fast cooldown continuous multi staging hybrid cryocoolers pressure sources configuration construction and technologies flow adjustment mems open and closed cycle cooldown process and similarity transient behavior mixed coolant cryocooling theory practice and applications special topics real gas choked flow rates gas purity clog formation optimal fixed orifice modeling cryosurgical devices warming by the inverse JT effect the theoretical aspects may be of interest not only to those working with cryocoolers but also for others with a general interest in real gas thermodynamics such as for example the inversion of the JT effect in its differential and integral forms and the exceptional behavior of the quantum gases a detailed list of references for each chapter comprises a broad literature survey it consists of more than 1 200 relevant publications and 450 related patents the systematically organized content arranged under a thorough hierarchy of headings supported by 227 figures and 41 tables and accompanied by various chronological notes of evolution enables readers a friendly interaction with the book Dr Ben Zion Maytal is a senior researcher at Rafael Advanced Defense Systems Ltd and an adjunct senior teaching fellow at the Technion Israel Institute of Technology Haifa Israel Prof John M Pfotenhauer holds a joint appointment in the departments of mechanical engineering and engineering physics at the University of Wisconsin Madison

it is possible to stretch a liquid and when suitably prepared liquids are capable of sustaining substantial levels of tension often for significant periods of time these negative pressure states are metastable but can last for days long enough for substantial experimental investigation this volume is a review of recent and current research into the behaviour of liquids under negative pressure part i deals with the thermodynamics of stretched liquids part ii discusses the physical and chemical behaviour of liquids under negative pressure part iii contains papers on the effect of negative pressure on the solidification of a liquid part iv is devoted to stretched helium and part v discusses cavitation in various stretched liquids part vi deals with the effect of foreign substances on cavitation

this study is centred on the Cornish manorial estates of the Duchy of Cornwall in the later middle ages and has been compiled from a very full and hitherto neglected series of records the completeness of which is perhaps unique for a lay estate most aspects of the history of the estates have been recorded and those which differed from other regions of England have been stressed in order to place the duchy estates within their regional context Dr Hatcher

has studied a wide range of documents and produced a mass of new evidence concerning tin mining fishing trade towns and local industry in cornwall and devon he shows for example that agricultural prosperity in later medieval cornwall followed an exceptional course and was determined by a series of interconnected changes within the regional economy with a much less direct and immediate causal link than is commonly assumed between declining population after 1349 and agricultural recession the intimate connexions between agriculture and industry and commerce are additionally emphasized by the manifold business interests of leading duchy tenants

published by the american geophysical union as part of the geophysical monograph series volume 47 there are a number of reasons for organizing a symposium one is to bring specialists together to discuss a specific problem in which they all have expertise and encourage the participants to talk openly about their current work which in all likelihood is not going to be in publishable form for some time another reason might be that a problem has been identified by one group of experts which needs the input from a previously loosely allied group before real progress can be made the international union of geodesy and geophysics symposium u s hydrogeological regimes and their subsurface thermal effects organised for the august 1987 general assembly in vancouver was a symposium of the latter type

the efficiency of thermal systems hvac engine cooling transmission and power steering has improved greatly over the past few years operating these systems typically requires a significant amount of energy however which could adversely affect vehicle performance to provide customers the level of comfort that they demand in an energy efficient manner innovative approaches must be developed vehicle thermal management heat exchangers climate control is an essential resource for engineers and designers working on thermal systems presenting the most recent and relevant technical papers that focus on this important vehicle component chapters include heating and air conditioning engine cooling underhood thermal environment heat transfer in engines heat exchangers new technologies

the third volume of the agrarian history of england and wales which was first published in 1991 deals with the last century and a half of the middle ages it concerns itself with the new demographic and economic circumstances created in large measure by endemic plague

accidents in industrial installations are random events hence they cannot be totally avoided only the probability of their occurrence may be reduced and their consequences be mitigated the book proceeds from hazards caused by materials and process conditions to indicating engineered and organizational measures for achieving the objectives of reduction and mitigation qualitative methods for identifying weaknesses of design and increasing safety as well as models for assessing accident consequences are presented the quantitative assessment of the effectiveness of safety measures is explained the treatment of uncertainties plays a role there they stem from the random character of the accident and from lacks of knowledge of some of the phenomena to be addressed the reader is acquainted with the simulation of accidents with safety and risk analyses and learns how to

judge the potential and limitations of mathematical modelling risk analysis is applied amongst others to functional safety and the determination of appropriate distances between industry and residential areas land use planning this shows how it can be used as a basis for safety relevant decisions numerous worked out examples and case studies addressing real plants and situations deepen the understanding of the subjects treated and support self study

the commercialisation of english society offers a major new interpretation of social and economic change in england over five centuries by 1500 english livelihoods depended more upon money and commercial transactions than ever before the institutional framework of markets had been transformed and urban development was more pronounced these changes were not however caused by any unilinear development of population output or money supply this pioneering study examines both institutional and economic transformation and the social changes that resulted and stresses the limited importance of formal trading institutions for the development of local trade commercial transition is throughout analysed from a broader perspective that looks at the changing power relations within medieval society which might loosely be described as feudal and considers how these relations were affected by such commercial development

principles of physical chemistry second edition uniquely uses simple physical models as well as rigorous treatments for understanding molecular and supramolecular systems and processes in this way the presentation assists students in developing an intuitive understanding of the subjects as well as skill in quantitative manipulations the unifying nature of physical chemistry is emphasized in the book by its organization beginning with atoms and molecules and proceeding to molecular assemblies of increasing complexity ending with the emergence of matter that carries information i e the origin of life a physicochemical process of unique importance the aim is to show the broad scope and coherence of physical chemistry
