a homage to the 1973 publication of *Architecture and Utopia* by Manfredo Tafuri echoed in the title this book is devoted to the radical experiences of the 1960s and to their consequences for the most recent developments in contemporary architecture as a response to the profound crisis of western culture that emerged in the 1960s radical artists from Italy, Austria, England and Japan called into question the foundations of modernist utopias they transmuted the difficulties of capitalism into a repertory of startling images that revealed the disturbing realities of consumer society even in those places still resistant to the penetration of modern architecture such as Superstudio and Archizoom's Florence their model though exhausted in the space of experimentation went on to inspire a generation of architects from the High Tech movement to Rem Koolhaas who sought to employ the paradigm of dystopia as both a visionary and a constructive method one which could operate on the architecture of late capitalism and generate unexpected possibilities for urban planning in the light of these examples how to define a unified dystopian method of design i.e. a common ground for an architecture that by its very nature seems to resist systematization are the most recognizable architectural expressions of this theoretical framework characterized by brazen displays of technology and structures of overwhelming scale merely isolated cases albeit of particular iconic power or do they belong to a wider landscape of antirational architectural projects and to what extent are these disturbing expressions premised on the utopian tradition or better yet the conceptual model of negative thought the goal of this book is to respond to such questions thus initiating an open dialogue about the legitimacy of this critical category with contributions by Dario Donetti, Marco de Michelis, Oliver Elser, Dominique Rouillard, Marco Biraghi, Marie Theres Stauffer, Maddalena Scimemi, Simon Sadler, Massimiliano Savorra and Anthony Vidler
