revised and updated the influence of international financial reporting standards ifrs on accounting across the world is stronger than ever most importantly this stems from the mandatory adoption of ifrss in many parts of the world including europe canada australia brazil and with some relatively small exceptions china additionally foreign registrants in the us are also permitted to use ifrs by the sec the impact of ifrss also extends to accounting developments as the iasb and the fasb work closely together to formulate new standards such as those recently issued on leasing and revenue recognition it is clear that investors analysts and valuers need to understand financial statements produced under ifrs to feed in to their valuations and broader investment decisions written by practitioners for practitioners the book addresses valuation from the viewpoint of the analyst the investor and the corporate acquirer it starts with valuation theory what is to be discounted and at what discount rate it explains the connection between standard methodologies based on free cash flow and on return on capital and it emphasizes that whichever method is used accurate interpretation of accounting information is critical to the production of sensible valuations the authors argue that forecasts of cash flows imply views on profits and balance sheets and that non cash items contain useful information

about future cash flows so profits matter the book addresses the implications for analysis modelling and valuation of key aspects of ifrs all updated for recent developments including pensions stock options derivatives provisions leases revenue recognition foreign currency the text also sets out the key differences between ifrs and us gaap treatments of these issues in addition to their implications for analysis a detailed case study is used to provide a step by step valuation of an industrial company using both free cash flow and economic profit methodologies the authors then address a range of common valuation problems including cyclical or immature companies as well as the specialist accounting and modelling knowledge required for regulated utilities resource extraction companies banks insurance companies real estate companies and technology companies accounting for mergers and disposals is first explained and then illustrated with a detailed potential acquisition

written as a text for masters and upper level undergraduate programmes in business teaches how to use financial statement information to assess a firm s financial performance value and creditworthiness includes real world cases to illustrate theory the step by step analysis methodology and discussion of strategy analysis

financial statements are the basis for a wide range of business analysis managers securities analysts bankers and consultants all use them to make business decisions there is strong demand among business students for course materials that provide a framework for using financial statement data in a variety of business analysis and valuation contexts business analysis valuation using financial statements text cases 4e allows you to undertake financial statement analysis using a four part framework 1 business strategy analysis for developing an understanding of a firm s competitive strategy 2 accounting analysis for representing the firm s business economics and strategy in its financial statements and for developing adjusted accounting measures of performance 3 financial analysis for ratio analysis and cash flow measures of operating and 4 prospective analysis then you ll learn how to apply these tools in a variety of decision contexts including securities analysis credit analysis corporate financing policies analysis mergers and acquisitions analysis and governance and communication analysis

master s thesis from the year 2006 in the subject business economics accounting and taxes grade 1 5 university of applied sciences fulda language english abstract in recent years the applicable accounting standards for companies changed considerably until the 1990s the development of accounting standards was mainly a national responsibility in consequence the standards were influenced by national factors therefore there was much divergence among domestic accounting standards only

in recent years there is a strong trend to the convergence of domestic accounting standards the international financial reporting standards ifrs play a major role in this convergence process the ifrs have influence on the convergence process in two ways on the one hand some countries require the use of ifrs or an adjusted version of ifrs for all domestic companies or for segments of domestic companies for example listed companies on the other hand some countries converge their domestic accounting standards with ifrs in a survey of fifty nine countries conducted by the major accounting firms in 2002 90 of these countries confirmed that they intend to adopt or converge with ifrs one of the most important decisions in this convergence process was the passing of a regulation by the commission of the european union eu in 2002 this regulation requires that all listed companies in the eu must present their consolidated financial statements in accordance with ifrs for financial years beginning on or after 1 january 2005 what are the reasons for this convergence process the main reason is that companies and investors increasingly conduct their operations on a global scale but the legal and regulatory frameworks for their reporting activities remain country based so the companies have to apply many different accounting standards for the reporting of their subsidiaries in different countries on the one hand this incurs additional costs for multinational companies and on the other hand it is more difficult for investors to compare investment opportunities globally the convergence of accounting standards reduces definitely the costs of multinational companies however it is not obvious if financial reports in accordance with ifrs of companies from different countries are really comparable the international accounting standards board iasb is responsible for the development of ifrs in order to get worldwide acceptance of ifrs the iasb provides many interest groups and countries the opportunity to participate in the standardsetting process
