assignment problems is a useful tool for researchers practitioners and graduate students in 10 self

contained chapters it provides a comprehensive treatment of assignment problems from their conceptual beginnings through present day theoretical algorithmic and practical developments the topics covered include bipartite matching algorithms linear assignment problems quadratic assignment problems multi index assignment problems and many variations of these researchers will benefit from the detailed exposition of theory and algorithms related to assignment problems including the basic linear sum assignment problem and its variations practitioners will learn about practical applications of the methods the performance of exact and heuristic algorithms and software options this book also can serve as a text for advanced courses in areas related to discrete mathematics and combinatorial optimisation the revised reprint provides details on a recent discovery related to one of jacobi s results new material on inverse assignment problems and quadratic assignment problems and an updated bibliography

nonlinear assignment problems naps are natural extensions of the classic linear assignment problem and despite the efforts of many researchers over the past three decades they still remain some of the hardest combinatorial optimization problems to solve exactly the purpose of this book is to provide in a single volume major algorithmic aspects and applications of naps as contributed by leading international experts the chapters included in this book are concerned with major applications and the latest algorithmic solution approaches for naps approximation algorithms polyhedral methods semidefinite programming approaches and heuristic procedures for naps are included while applications of this problem class in the areas of multiple target tracking in the context of military surveillance systems of experimental high energy physics and of parallel processing are presented audience researchers and graduate students in the areas of combinatorial optimization mathematical programming operations research physics and computer science

this third edition of the popular management science text featuring more concise coverage of topics new case studies for all eighteen chapters and more illustrations tables and diagrams practical approach teaches students how to use management science techniques in real world situations contains over 500 problems and 200 discussion questions
