difference between and operators Addressof operator returns the memory address of a variable Dereference operator accesses the value stored at the memory address pointed to by a pointer 4 3 What is dynamic memory allocation Dynamic memory allocation allows allocating memory during runtime using functions like malloc calloc and realloc This is crucial when the amount of memory needed is not known beforehand 4 What are malloc calloc and free malloc Allocates a block of memory of specified size calloc Allocates a block of memory for a specified number of elements each of specified size and initializes them to zero free Releases dynamically allocated memory back to the system Failure to free allocated memory leads to memory leaks IV Arrays and Strings 1 What is an array An array is a contiguous block of memory that stores elements of the same data type 2 What is a string in C A string in C is a nullterminated sequence of characters The null character 0 marks the end of the string 3 How to declare and initialize an array c int numbers5 1 2 3 4 5 Declaration and initialization char name10 John String initialization 4 How to access array elements Array elements are accessed using their index starting from 0 For example numbers0 accesses the first element 1 V Functions and Structures 1 What is a function A function is a block of code that performs a specific task It improves code organization and reusability 2 Explain function prototypes 5 Function prototypes declare the functions return type name and parameters before its definition This allows the compiler to check for type errors 3 What is a structure A structure groups variables of different data types under a single name 4 How to declare and access members of a structure c struct Student char name50 int rollNo float marks struct Student s1 strcpys1name Alice s1rollNo 101 s1marks 855 VI Common Pitfalls to Avoid Uninitialized variables Always initialize variables before use Offbyone errors Carefully check loop boundaries and array indices Memory leaks Always free dynamically allocated memory Dangling pointers Avoid using pointers to memory that has been freed Buffer overflows Ensure sufficient buffer size to avoid writing beyond allocated memory VII Summary This guide covered fundamental C programming concepts crucial for acing your viva examination Understanding pointers memory management control structures and data structures is key Remember to practice coding and focus on avoiding common pitfalls VIII FAQs 1 What are the advantages of using pointers in C Pointers offer several advantages dynamic memory allocation efficient data manipulation especially with arrays and structures passing large data structures to functions efficiently and implementing data structures like linked lists and trees 6 2 How can I handle errors during dynamic memory allocation Always check the return value of malloc and calloc If they return NULL it indicates memory allocation failure Handle this appropriately perhaps by printing an error message and exiting the program or attempting alternative strategies 3 What is the difference between a local and global variable A local variable is declared inside a function and is only

accessible within that function A global variable is declared outside any function and is accessible from any function in the program Overuse of global variables can reduce code clarity and maintainability 4 Explain the concept of recursion in C Recursion is a programming technique where a function calls itself directly or indirectly Its useful for solving problems that can be broken down into smaller selfsimilar subproblems like traversing tree structures or calculating factorials However improper use can lead to stack overflow errors 5 What are header files and why are they important Header files h contain function prototypes macro definitions and data structure declarations They are included in source code files using include directives They improve code organization reusability and allow modular programming by separating interface header from implementation source code Standard header files like stdioh provide access to standard inputoutput functions
