C Programming Viva Questions With Answers **C Programming Viva Questions with Answers** **A Comprehensive Guide** This guide provides a comprehensive overview of frequently asked C programming viva questions categorized for clarity and enhanced understanding. It includes answers, step-by-step explanations, best practices, and common pitfalls to help you ace your viva examination. Well cover fundamental concepts: memory management, pointers, data structures, and more.

C Programming Viva Questions Answers Interview Questions **C Language Data Structures Pointers Memory Management Programming Fundamentals Best Practices Common Pitfalls**

I Fundamental Concepts

1. What is C Programming?
2. Explain the difference between int, float, and char data types.
3. What are keywords in C? Give examples.
4. What is the purpose of the main function? The main function is the entry point of any C program.
5. Execution begins from the main function.

II Control Structures and Loops

1. Explain different types of loops in C.
2. C provides three main loop types: for loop, while loop, and do-while loop. Used for iterating a specific number of times.
3. c for int i = 0; i < 10; i++
4. printf("Eligible to vote");
5. printf("Not eligible to vote");

III Pointers and Memory Management

1. What is a pointer? A pointer is a variable that stores the memory address of another variable. It's declared using the symbol &.
2. Explain the difference between & and &operator.
3. Addressof operator returns the memory address of a variable. Dereference operator accesses the value stored at the memory address pointed to by a pointer.
4. What is dynamic memory allocation? Dynamic memory allocation allows allocating memory during runtime using functions like malloc, calloc, and realloc. This is crucial when the amount of memory needed is not known beforehand.
5. What are malloc, calloc, and free? malloc allocates a block of memory of specified size. calloc allocates a block of memory for a specified number of elements, each of specified size, and initializes them to zero. free releases dynamically allocated memory back to the system. Failure to free allocated memory leads to memory leaks.

IV Arrays and Strings

1. What is an array? An array is a contiguous block of memory that stores elements of the same data type.
2. What is a string in C? A string in C is a null-terminated sequence of characters. The null character '\0' marks the end of the string.
3. How to declare and initialize an array: c int numbers[5] = {1, 2, 3, 4, 5};
4. Declaration and initialization: char name[10] = "John";
5. String initialization: char name[10] = "John";

V Functions and Structures

1. What is a function? A function is a block of code that performs a specific task. It improves code organization and reusability.
2. Explain function prototypes.
3. Function prototypes declare the function's return type, name, and parameters before its definition. This allows the compiler to check for type errors.
4. What is a structure? A structure groups variables of different data types under a single name.
5. How to declare and access members of a structure: struct Student { char name[50]; int rollNo; float marks; } s1; s1.name = "Alice"; s1.rollNo = 101; s1.marks = 85.5;

VI Common Pitfalls to Avoid

1. Uninitialized variables: Always initialize variables before use. Off-by-one errors: Carefully check loop boundaries and array indices.
2. Memory leaks: Always free dynamically allocated memory.
3. Dangling pointers: Avoid using pointers to memory that has been freed.
4. Buffer overflows: Ensure sufficient buffer size to avoid writing beyond allocated memory.

VII Summary

This guide covered fundamental C programming concepts crucial for acing your viva examination. Understanding pointers, memory management, control structures, and data structures is key. Remember to practice coding and focus on avoiding common pitfalls.
