this is a revised updated and significantly augmented edition of a classic carus  
monograph a bestseller for over 25 years on the theory of functions of a real  
variable earlier editions of this classic carus monograph covered sets metric  
spaces continuous functions and differentiable functions the fourth edition adds  
sections on measurable sets and functions the lebesgue and stieltjes integrals  
and applications the book retains the informal chatty style of the previous  
editions remaining accessible to readers with some mathematical  
sophistication and a background in calculus the book is thus suitable either for  
self study or for supplemental reading in a course on advanced calculus or real  
analysis not intended as a systematic treatise this book has more the character  
of a sequence of lectures on a variety of interesting topics connected with real  
functions many of these topics are not commonly encountered in  
undergraduate textbooks e g the existence of continuous everywhere oscillating  
functions via the baire category theorem the universal chord theorem two  
functions having equal derivatives yet not differing by a constant and  
application of stieltjes integration to the speed of convergence of infinite series  
this book recaptures the sense of wonder that was associated with the subject  
in its early days it is a must for mathematics libraries
