modelling with differential equations in chemical engineering covers the modelling of rate processes of  
engineering in terms of differential equations while it includes the purely mathematical aspects of the solution  
of differential equations the main emphasis is on the derivation and solution of major equations of engineering  
and applied science methods of solving differential equations by analytical and numerical means are presented  
in detail with many solved examples and problems for solution by the reader emphasis is placed on numerical  
and computer methods of solution a key chapter in the book is devoted to the principles of mathematical  
modelling these principles are applied to the equations in important engineering areas the major disciplines  
covered are thermodynamics diffusion and mass transfer heat transfer fluid dynamics chemical reactions and  
automatic control these topics are of particular value to chemical engineers but also are of interest to  
mechanical civil and environmental engineers as well as applied scientists the material is also suitable for  
undergraduate and beginning graduate students as well as for review by practising engineers
