over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport plants have become larger and are often situated in or close to densely populated areas increased hazard of loss of life or property is

continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha to name but a few. The field of loss prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could, without exaggeration, be referred to as the bible for the process industries. This is the standard reference work for chemical and process engineering safety professionals. For years, it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all-encompassing reference. Instead, Frank Lees' world-renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field. Sam Mannan is professor of chemical engineering at Texas A&M University and heads the Mary Kay O'Connor Process Safety Center at Texas A&M. He received his M.S. and Ph.D. in chemical engineering from the University of Oklahoma and joined the chemical engineering department at Texas A&M University as a professor in 1997. He has over 20 years of experience as an engineer working both in industry and academia. New detail is added to chapters on fire safety, engineering, explosion hazards, analysis, and suppression, and new appendices feature more recent disasters. The many thousands of references have been updated along with standards and codes of practice issued by authorities in the U.S., U.K., Europe, and internationally. In addition to all this, more regulatory relevance and case studies have been included in this edition. Written in a clear and concise style, *Loss Prevention in the Process Industries* covers traditional areas of personal safety as

well as the more technological aspects and thus provides balanced and in depth coverage of the whole field of safety and loss prevention a must have standard reference for chemical and process engineering safety professionals the most complete collection of information on the theory practice design elements equipment and laws that pertain to process safety only single work to provide everything principles practice codes standards data and references needed by those practicing in the field

this is the standard work in the field of industrial hygiene occupational health hazard control to be cost effective should be made an integral part of the production process a proper mix of engineering controls administrative controls and personal protective equipment is basic to occupational safety this two volume work presents safe practical production processes and is written by professionals who have hands on experience and are cerified in the practice of industrial hygiene it covers organic and inorganic materials of a wide range of toxicities from low to high materials handling from small to large quantities and effective controls for each process and material covered controls descrived are often applicable to processes not specifically described in these volumes the work should be of benefit to industrial hygienists engineers compliance officers and toxicologists

deindustrialization white flight and inner city poverty have spelled trouble for baltimore schools marion orr now examines why school reform has been difficult to achieve there revealing the struggles of civic leaders and the limitations placed on baltimore s african american community as each has tried to rescue a failing school system examining the interplay between government and society orr presents the first systematic analysis of social capital both within the african american community black social capital and outside it where social capital

crosses racial lines or shows that while black social capital may have created solidarity against white domination in Baltimore it hampered African American leaders' capacity to enlist the cooperation from white corporate elites and suburban residents needed for school reform or examines social capital at the neighborhood level in elite level interactions and in intergovernmental relations to argue that black social capital doesn't necessarily translate into the kind of intergroup coalition needed to bring about school reform he also includes an extensive historical survey of the black community showing how distrust engendered by past black experiences has hampered the formation of significant intergroup social capital the book features case studies of school reform activity including the first analysis of the politics surrounding Baltimore's decision to hire a private for profit firm to operate nine of its public schools these cases illuminate the paradoxical aspects of black social capital in citywide school reform while offering critical perspectives on current debates about privatization site based management and other reform alternatives Orr's book challenges those who argue that social capital alone can solve fundamentally political problems by purely social means and questions the efficacy of either privatization or black community power to reform urban schools black social capital offers a cogent conceptual synthesis of social capital theory and urban regime theory that demonstrates the importance of government politics and leadership in converting social capital into a resource that can be mobilized for effective social change
