seeing is believing is a phrase that conveys the idea that people tend to believe something more strongly and confidently when they can actually see it with their own eyes it suggests that visual evidence or firsthand experience holds a significant level of conviction and trustworthiness often surpassing what is merely heard or described the phrase implies that when you witness something directly you are more likely to accept its reality or truthfulness compared to when you rely solely on descriptions or explanations in short the act of seeing something with your own eyes can be a powerful way to persuade and convince yourself or others of its existence or validity for this reason techniques to visualize phenomena that are normally invisible are very effective in

elucidating phenomena and are utilized in a variety of academic fields of course various visualization techniques are also used in tribology to contribute to the better understanding of complex phenomena tribology is a scientific and engineering discipline that studies friction wear and lubrication of surfaces in relative motion tribology plays an important role in understanding and optimizing the performance durability and efficiency of mechanical systems and components from small scale equipment to large scale industrial machinery that is tribology aims to investigate the complex interactions between materials under various conditions and to minimize friction and wear through the use of lubricants coatings and surface treatments however since tribology deals with severe contact conditions that result in thin film thicknesses nm order and high contact pressure gpa order the development of visualization techniques is very important to elucidate the phenomena moreover visualization of actual complex phenomena not only verifies existing theories but also provides opportunities for new discoveries and hints for the construction of new theories that emerge from such discoveries
