an exploration of embodied intelligence and its implications points toward a theory of intelligence in general with case studies of intelligent systems in ubiquitous

computing business and management human memory and robotics how could the body influence our thinking when it seems obvious that the brain controls the body in how the body shapes the way we think rolf pfeifer and josh bongard demonstrate that thought is not independent of the body but is tightly constrained and at the same time enabled by it they argue that the kinds of thoughts we are capable of have their foundation in our embodiment in our morphology and the material properties of our bodies this crucial notion of embodiment underlies fundamental changes in the field of artificial intelligence over the past two decades and pfeifer and bongard use the basic methodology of artificial intelligence understanding by building to describe their insights if we understand how to design and build intelligent systems they reason we will better understand intelligence in general in accessible nontechnical language and using many examples they introduce the basic concepts by building on recent developments in robotics biology neuroscience and psychology to outline a possible theory of intelligence they illustrate applications of such a theory in ubiquitous computing business and management and the psychology of human memory embodied intelligence as described by pfeifer and bongard has important implications for our understanding of both natural and artificial intelligence

the cognitive potency of the human mind can be fully appreciated only if it is conceived of as a linguistic mind this is the starting point of nikola kompa s investigation into the relationship between language and cognition underpinned by philosophical ideas from plato to ockham and from locke to vygotsky kompa uses theories within the philosophy of language mind and cognitive science and draws on neuro psychology and psycholinguistic studies to explore core ideas about language and cognition how did language transform our ancestors into creatures of considerable cognitive and social accomplishment how does language augment cognition is language only a means of communicating our ideas or is a means of thinking itself her study has repercussions for a broad range of questions from how humans differ from other animals and what a cognitive architecture looks like if it approximates the achievements of the human mind to questions of education and cross cultural communication theorizing and forming hypotheses about how language and cognition might have coevolved how the availability of symbolic labels enhance various cognitive functions what the cognitive function of inner speech might be and how inner speech and thought relate to each other kompa addresses the perennial philosophical question of what the benefits of having a language might be and brings into sharper relief the intimate connection between linguistic and other cognitive functions informed by recent discussions on

language evolution labels and inner speech this timely contribution helps us understand more about how language changes the way we think
