this book is a timely survey of much of the algebra developed during the last several centuries including its applications to algebraic geometry and its potential use in geometric modeling the present volume makes an ideal textbook for an abstract algebra course while the forthcoming sequel lectures on algebra ii will serve as a textbook for a linear algebra course the author s fondness for algebraic geometry shows up in both volumes and his recent preoccupation with the applications of group theory to the calculation of galois groups is evident in the second volume which contains more local rings and more algebraic geometry both books are based on the author s lectures at purdue university over the last few years

biographies of more than 100 irish scientists or those with strong irish connections in the disciplines of chemistry and physics including astronomy mathematics etc describing them in their irish and international scientific social educational and political context written in an attractive informal style for the hypothetical educated layman who does not need to have studied science well received in irish and international reviews

this is a comprehensive two volumes text on plane and space geometry transformations and conics using a synthetic approach the first volume focuses on euclidean geometry of the plane and the second volume on circle measurement transformations space geometry conics the book is based on lecture notes from more than 30 courses which have been taught over the last 25 years using a synthetic approach it discusses topics in euclidean geometry ranging from the elementary axioms and their first consequences to the complex the famous theorems of pappus ptolemy euler steiner fermat morley etc through its coverage of a wealth of general and specialized subjects it provides a comprehensive account of the theory with chapters devoted to basic properties of simple planar and spatial shapes transformations of the plane and space and conic sections as a result of repeated exposure of the material to students it answers many frequently asked questions particular attention has been given to the didactic method the text is accompanied by a plethora of figures more than 2000 and exercises more than 1400 most of them with solutions or expanded hints each chapter also includes numerous references to alternative approaches and specialized literature the book is mainly addressed to students in mathematics physics engineering school teachers in these areas as well as amateurs and lovers of geometry offering a sound and self sufficient basis for the study of any possible problem in euclidean geometry the book can be used to support lectures to the most advanced level or for self study

this classic work first published in 1947 in three volumes provides a lucid and rigorous account of the foundations of modern algebraic geometry the authors have confined themselves to fundamental concepts and geometrical methods and do not give detailed developments of geometrical properties but geometrical meaning has been emphasized throughout this first volume is divided into two parts the first is devoted to pure algebra the basic notions the theory of matrices over a non commutative ground field and a study of algebraic equations the second part is in n dimensions it concludes with a purely algebraic account of collineations and correlations

originally published in 1920 this volume contains book one of euclid s elements in greek together with an introduction and notes section written in english it was created to provide young students with a contextual understanding of geometry and the development of geometrical principles one which was increasingly neglected in the standard school textbooks of the time by returning to the elements in their original form it was hoped that students would gain a fundamental understanding of the ideas put forward in the text one which would increase their knowledge and enthusiasm it was also hoped that the dual process of learning greek and geometry would be an effective way of impressing content on the mind of the learner this volume will be of value to anyone with an interest in geometry and the development of pedagogy
