doctoral thesis dissertation from the year 2012 in the subject english language and literature studies linguistics university of ibadan
language english abstract existing studies on izon language have concentrated on unilingual application of traditional grammar in
constructing well formed sentences thereby neglecting critical descriptions of the ways morphosyntactic features ensure the
derivation of convergent structures a contrastive examination of english a standard for universal grammar analysis and izonn
languages can properly characterise these syntactically significant features this work therefore investigates the morphosyntactic
features in english and izon languages with a view to identifying and describing the morphosyntactic features that make the
structures of the two languages converge the study adopts chomsky s minimalist program which emphasises checking of
morphological features the research is based on standard english and the kolokuma dialect of izon used in education and the media
and is mutually intelligible with other dialects data on english were collected from various books on english grammar and those on
izon were collected from native speakers in kolokuma and opokuma clans in bayelsa state where the dialect is spoken and
complemented with the researcher s native speaker s introspective data since the study is competence based completely
grammatical structures from each language were used for the analysis clausal and phrasal syntactic structures of english and izon
languages were comparatively analysed based on the feature checking processes of the minimalist program to identify shared and
idiosyncratic features universal features common to both languages include phrases clauses syntactic heads and wh fronting

however english and izon opt for different head parameters heads in english precede their complements while heads in izon follow their complements although nominative case licensing occurs in spec head structures in both languages accusative case is licensed in head complement relationship in english and complement head structure in izon both english and izon permit wh fronting at spec cp but izon wh expressions obligatorily co occur with focus particles ki or ko which are functional elements that licence wh elements whereas english constructs relative clauses with overt and interpretable complementizers such as who which precede their complement clauses izon constructs relative clauses without overt interpretable wh expressions except an overt amee that which follows its complement clause
