since its initial publication in 1970 design methods has been considered the seminal work on design methodology written by one of the founders of the design methods movement it has been highly praised in international journals and has been translated into japanese romanian polish russian and spanish as jones states in the preface alongside the old idea of design as the drawing of objects that are then to be built or manufactured there are many new ideas of what it is all very different designing as the process of devising not individual products but whole systems or environments such as airports transportation hypermarkets educational curricula broadcasting schedules welfare schemes banking systems computer networks design as participation the involvement of the public in the decision making process design as creativity which is supposed to be potentially present in everyone design as an educational discipline that unites arts and science and perhaps can go further than either and now the idea of designing without a product as a process or way of living in itself design methods first evaluates traditional methods such as design by drawing and shows how they do not adequately address the complexity of demands upon today s designer the book then provides 35 new methods that have been developed to assist designers and planners to become more sensitive to user needs these methods move beyond a focus on the product to the thought that precedes it throughout the book s emphasis on integrating creative and rational skills directs readers away from

narrow specialization to a broader view of design the new methods are described and classified in a way that makes it easier for designers and planners to find a method that suits a particular design situation they include logical procedures such as systematic search and systems engineering data gathering procedures such as literature searching and the writing of questionnaires innovative procedures such as brainstorming and synectic and system transformation and evaluative procedures such as specification writing and the selection of criteria offering a wider view accompanied by appropriate skills than can be obtained from the teaching of any specialized design profession design methods is important reading for designers and teachers in numerous fields it will be welcomed by engineers architects planners and landscape architects as well as by interior graphic product and industrial designers this extraordinary book will provide key insights to software designers and numerous others outside traditional design professions who are nevertheless creatively involved in design processes it is also relevant to the teaching of cultural studies technology and any kind of creative project
