internal combustion engines are among the most fascinating and ingenious machines which with their invention and continuous

development have positively influenced the industrial and social history during the last century especially by virtue of the role played as propulsion technology par excellence used in on road private and commercial transportation nowadays the growing attention towards the de carbonization opens up new scenarios but ic engines will continue to have a primary role in multiple sectors automotive marine offroad machinery mining oil gas and rail power generation possibly with an increasing use of non fossil fuels the book is organized in monothematic chapters starting with a presentation of the general and functional characteristics of ic engines and then dwelling on the details of the fluid exchange processes and the definition of the layout of intake and exhaust systems obviously including the supercharging mechanisms and continue with the description of the injection and combustion processes to conclude with the explanation of the formation control and reduction of pollutant emissions and radiated noise

sir diarmuid downs cbe feng frs engineering is about designing and making marketable artefacts the element of design is what principally distinguishes engineering from science the engineer is a creator he brings together knowledge and experience from a variety of sources to serve his ends producing goods of value to the individual and to the community an important source of information on which the engineer draws is the work of the scientist or the scientifically minded engineer the pure scientist is concerned with knowledge for its own sake and receives his greatest satisfaction if his experimental observations fit into an aesthetically satisfying theory the applied scientist or engineer is also concerned with theory but as a means to an end he tries to devise a theory which will encompass the known experimental facts both because an all embracing theory somehow serves as an extra validation of the facts and because the theory provides us with new leads to further fruitful experimental investigation i have laboured these perhaps rather obvious points because they are well exemplified in this present book the first internal combustion engines produced just over one hundred years ago were very simple the design being based on very limited experimental information the current engines are extremely complex and while the basic design of cylinder piston connecting rod and crankshaft has changed but little the overall performance in respect of specific power fuel economy pollution noise and cost has been absolutely transformed
