triz is a brilliant toolkit for nurturing engineering creativity and innovation this accessible colourful and practical guide has been developed from problem solving workshops run by oxford creativity one of the world s top triz training organizations started by gadd in 1998 gadd has successfully introduced triz to many major organisations such as airbus sellafeld sites

saint gobain dca doosan babcock kraft qinetiq trelleborg rolls royce and bae systems working on diverse major projects including next generation submarines chocolate packaging nuclear clean up sustainability and cost reduction engineering companies are increasingly recognising and acting upon the need to encourage successful practical and systematic innovation at every stage of the engineering process including product development and design triz enables greater clarity of thought and taps into the creativity innate in all of us transforming random ineffective brainstorming into targeted audited creative sessions focussed on the problem at hand and unlocking the engineers knowledge and genius to identify all the relevant solutions for good design engineers and technical directors across all industries as well as students of engineering entrepreneurship and innovation triz for engineers will help unlock and realise the potential of triz the individual tools are straightforward the problem solving process is systematic and repeatable and the results will speak for themselves this highly innovative book satisfies the need for concise clearly presented information together with practical advice on triz and problem solving algorithms employs explanatory techniques processes and examples that have been used to train thousands of engineers to use triz successfully contains real relevant and recent case studies from major blue chip companies is illustrated throughout with specially commissioned full colour cartoons that illustrate the various concepts and techniques and bring the theory to life turns good engineers into great engineers

combinatorial optimization is the process of finding the best or optimal solution for problems with a discrete set of feasible solutions applications arise in numerous settings involving operations management and logistics such as routing scheduling packing inventory and production management location logic and assignment of resources the economic impact of combinatorial optimization is profound affecting sectors as diverse as transportation airlines trucking rail and shipping forestry manufacturing logistics aerospace energy electrical power petroleum and natural gas telecommunications biotechnology financial services and agriculture while much progress has been made in finding exact provably optimal solutions to some combinatorial optimization problems using techniques such as dynamic programming cutting planes and branch and cut methods many hard combinatorial problems are still not solved exactly and require good heuristic methods moreover reaching optimal solutions is in many cases meaningless as in practice we are often dealing with models that are rough simplifications of reality the aim of heuristic methods for combinatorial optimization is to quickly produce good quality solutions without necessarily providing any guarantee of solution quality metaheuristics are high level procedures that coordinate simple heuristics such as local search to find solutions that are of better quality than those found by the simple heuristics alone modern metaheuristics include simulated annealing genetic algorithms tabu search grasp scatter search ant colony optimization variable neighborhood search and their hybrids
