### Visualizing the Problem

### A StepbyStep Approach

Lets consider a typical problem involving the First Law of Thermodynamics

**Problem** A pistoncylinder device contains 01 kg of air initially at 100 kPa and 27°C The air is compressed isothermally until its volume is halved Determine the work done during this process

**Solution** using the solution manual as a guide

- 1 Identify the system Our system is the air within the pistoncylinder
- 2 Visualize Imagine a piston moving inwards compressing the air This is an isothermal process meaning the temperature remains constant Imagine an illustration here A simple diagram showing a pistoncylinder device with an arrow indicating compression
- 3 Apply the First Law For an isothermal process the change in internal energy  $U$  is zero
- 2 Therefore the work done  $W$  is equal to the heat transfer  $Q$  Equation  $U = Q - W$   $0 = Q - W$   $Q = W$
- 4 Determine the work For an isothermal process involving an ideal gas the work done is given by  $W = mRT \ln(V_2/V_1)$  where  $m$  is the mass  $R$  is the specific gas constant  $T$  is the temperature and  $V_1$  and  $V_2$  are the initial and final volumes
- 5 Calculate Using the ideal gas law  $PV = mRT$  we can find the initial and final volumes The solution manual will guide you through these calculations showing you how to substitute values and arrive at the final answer
